

# Welcome to the Defence Supply Chain Business Acumen Knowledge Blitz

18 June 2024

# Welcome & Land Acknowledgement

## Master of Ceremonies

**Denis Forest**

Lead

Materiel Management  
Practitioner Professionalization  
Project (MMP3)

# Administration Points

- Emergency Exits
- Washrooms
- Morning Break and Lunch
- Phones on silent please
- Leaving the room

# Land Acknowledgement

At this moment I would like to acknowledge that we all live, work and play on First Nations, Inuit or Métis territory in what we know as Canada. Because I am in Ottawa, I am joining from the traditional unceded and unsurrendered territory of the Algonquin Anishinaabe people. I thank them for their past and present stewardship of this land that I enjoy to nourish and protect me.

I welcome you to discover something about the territory you are joining from. By educating ourselves, we honour our commitment to reconciliation.

# Agenda

Hour	Topic
0900	Welcome & Land Acknowledgement
0905	Opening Remarks
0915	Module 1 Government of Canada Direction
0945	Module 2 Departmental Policies
1015	Break
1030	Module 3 DSC Business Execution
1230	Lunch
1330	Module 4 DSC Analytics
1500	Break
1515	Module 5 Reporting
1545	Closing Remarks

# Feedback Form

**Your feedback is much appreciated and helps to improve future professionalization events**

## Module 1

### Government of Canada Direction

**Bronwynn Guymer**

Section Head

DMPP 7

# Learning objectives

## Module 1 Government of Canada Direction

At the end of this module, you will be able to:

- Identify the Legislative Framework and Policies governing Materiel Management
- Describe the Governmental Expectations for the DSC
- Explain the purpose of these policies
- Discuss DND/CAF role in the Whole of Government, its structure and Strategic Environment

# Module 1 - Government of Canada Direction

## Main Topics:

1. Legislative Framework
2. Governmental Expectations
3. Purpose
4. Additional Context

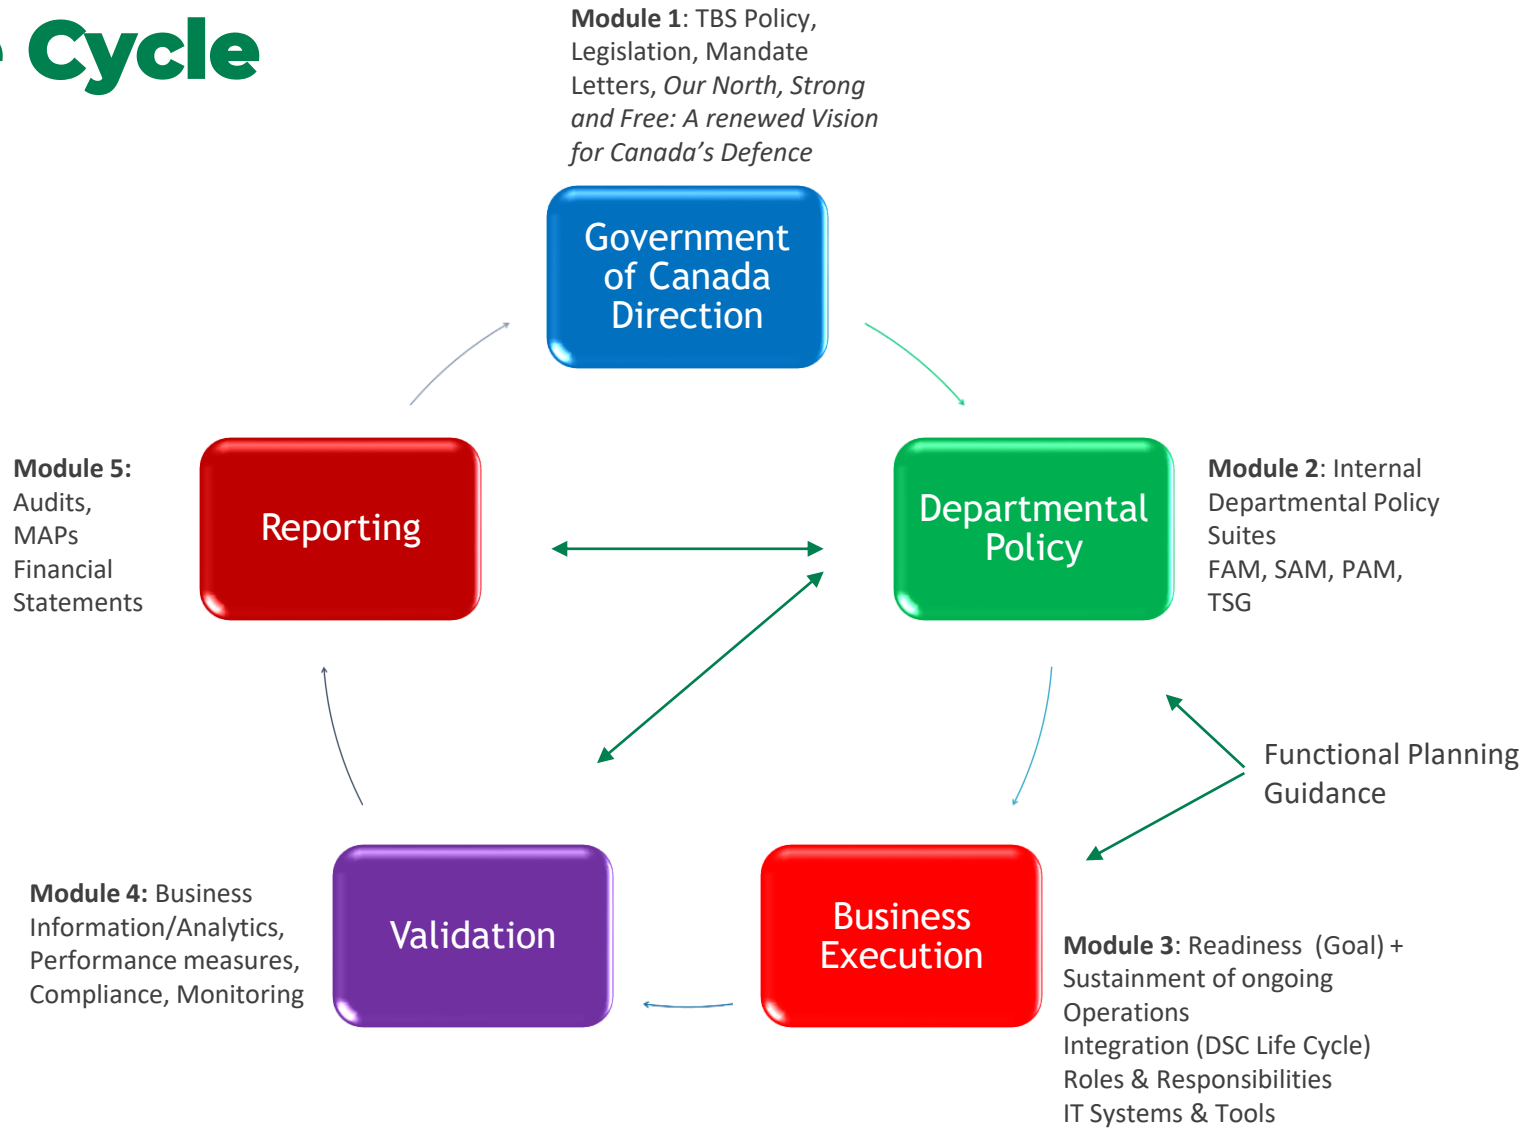

## Activity 1-1

**Join at [slido.com](https://slido.com)  
Event code: DSC**

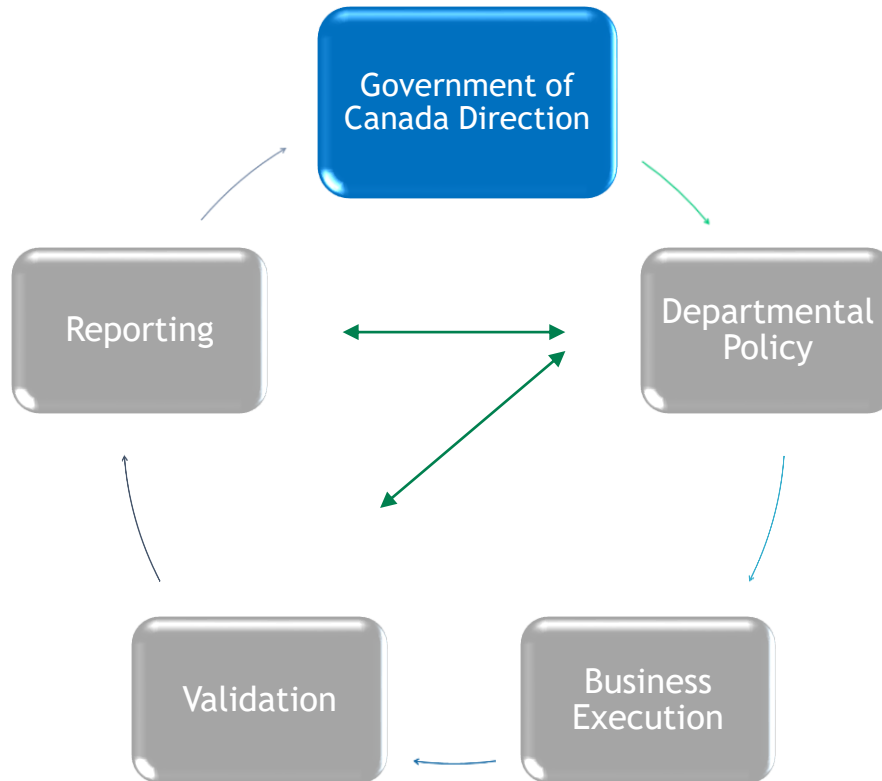

# The Cycle

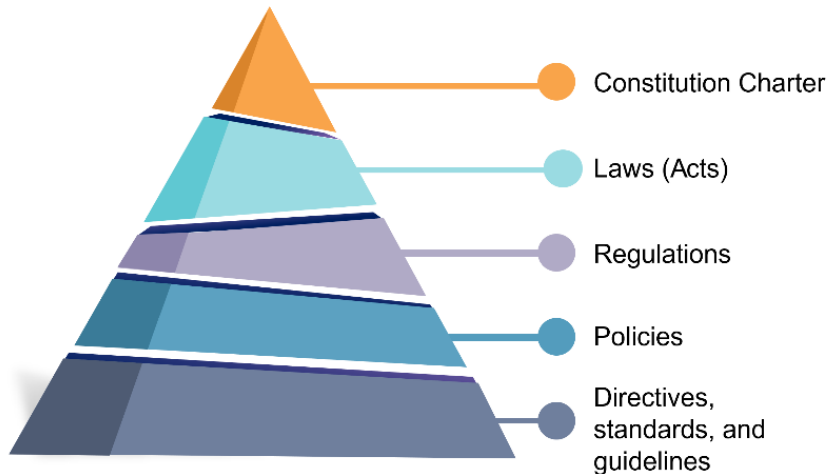

# The Cycle

Module 1: TBS Policy, Legislation, Mandate Letters, *Strong Secure Engaged: Canada's Defence Policy*

# Topic #1: Legislative Framework

## Legislative Framework

- Legislation/Acts
- Regulations
- International Agreements
- Mandate Letters
- *Strong Secure Engaged: Canada's Defence Policy (2017-2024)*
- *Our North, Strong and Free: A renewed Vision for Canada's Defence*
- Government Policy Objectives (*Green & Indigenous Procurement*)
- Treasury Board Directives

# Some Key Higher Order Direction

- a. National Defence Act (R.S.C., 1985, c. N-5);
- b. Federal Accountability Act (S.C.2006, c.9);
- c. Defence Production Act (R.S.C., 1985, c. D-1);
- d. Financial Administration Act (FAA);
- e. Surplus Crown Assets Act (R.S.C., 1985, c. S-27);
- f. Security of Information Act (justice.gc.ca);
- g. Export and Import Permits Act (R.S.C., 1985, c.E-19);
- h. Federal Real Property and Federal Immovables Act (S.C. 1991, c.50);
- i. Hazardous Products Act (R.S.C., 1985, c.H-3);
- j. The International Traffic in Arms Regulations (ITAR);
- k. Controlled Technology Access and Transfer (CTAT);
- l. Controlled Goods Regulations;
- m. Arms Trade Treaty;
- n. Treasury Board - Directive on the Management of Materiel

# Individual Topics

- a. [Alternative Fuels Act](#);
- b. [Emergencies Act](#);
- c. [Canadian Environmental Protection Act, 1999](#) and associated regulations;
- d. [Transportation of Dangerous Goods Act, 1992](#);
- e. [Liquefied Petroleum Gases Bulk Storage Regulations](#)
- f. [Storage Tank Systems for Petroleum Products and Allied Petroleum Products Regulations, SOR/2008-197](#);
- g. [Criminal Code of Canada](#)
- h. [Government Contracts Regulations \(SOR.87-402\)](#);
- i. [Public Services and Procurement Canada \(PSPC\) Policy and Guidelines- Supply Manual](#);
- j. [Public Services and Procurement Canada \(PSPC\) Green Procurement](#);
- k. [TBITS 25: Materiel Coding – Implementation Criteria](#)
- l. [STANAGs](#)

# Topic #2: Governmental Expectations

- Program Delivery
- Sound Stewardship
- Value for Money
- Open, Fair, Transparent
- These are consistent across directives on
  - Materiel management
  - Procurement
  - Real Property and
  - Investment Planning

# Topic #3: Purpose of the Policies

- Standardization across Government
- Demonstration of Due Diligence with Resources from the Government of Canada
- Alignment with the Values and Ethics of Canada
- Safety and Security

# Topic #4: Additional Context

- National Defence within the Whole of Government
- National Defence Leadership Structure
  - Governance of the DSC
- Strategic Environment

# National Defence in the “Whole of Government”

*Defence Management: A Government of Canada activity involving multiple Departments*

# DSC Leadership Structure

Minister of  
National

# Module 3G - DSC Business Execution

## MAIN TOPICS

- A. Core Supply Chain Concepts, Goals and Operation
- B. Integration in the DSC
- C. Materiel Requirements Planning (MRP) Concepts
- D. Roles & Responsibilities
- E. IT Systems & Tools
- F. Enabling the Smooth Flow of Data and Materiel

# Learning objectives

## Module 3 – DSC Business Execution Section A. Core Supply Chain Concepts, Goals and Operation

At the end of this Section, you will be able to:

- Explain the purpose, scope and depth and key activities of the DSC
- Articulate the vision/mission, and the strategic objectives and attributes of the DSC
- Describe the key building blocks of a DSC Model
- Explain the types of demands at various lines of supply and distribution concepts

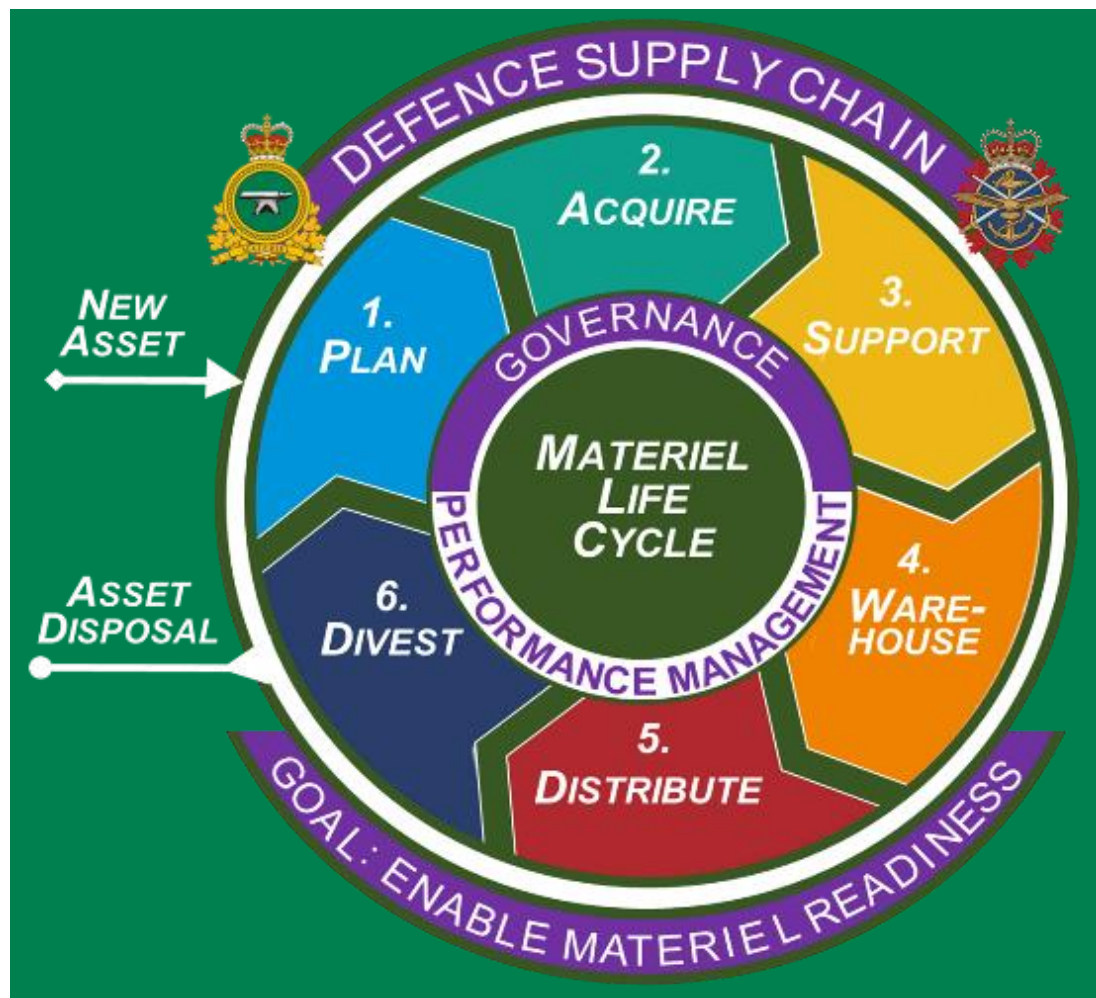

# DSC Definition, Goal and Key Business Activities

## DEFINITIONS

**Defence Supply Chain (DSC Governance Charter):** The DSC is from **beginning to end supply functions** housed within the National Defence Organizations, other government Departments and industry to deliver **materiel sustainment** to the Canadian Armed Forces.

**Materiel Sustainment** (*soutien du matériel*)(DAOD 3005-0): Coordinated activities required to support materiel throughout its service life. (Defence Terminology Bank record number 694822)

# DSC Mission/Vision

- **Mission:** The mission of the DSC is to deliver...

- ✓ *the right materiel*
- ✓ *at the right place and time*
- ✓ *in the right condition*

as required by the Canadian Armed Forces in as *cost-effective manner* as possible.

Achievement of the mission also requires the materiality and stewardship demands of the Government of Canada be adhered to

- **Vision:** The DSC...
  - is an **agile and efficient end-to-end strategic capability** that fully meets the materiel support requirements of the Canadian Armed Forces and the stewardship obligations of the Government of Canada.
  - employs **evidence-based decision making, modernized processes and technologies**, and is delivered by military and civilian professionals committed to continuous improvement.

# Types of Materiel in the DSC

Operational Weapons Systems

Complex Components and Parts

Consumables  
(e.g. POL, nuts & bolts, etc)

Support & Test Equip

Ammunition

Military Clothing,  
Rations and much more!

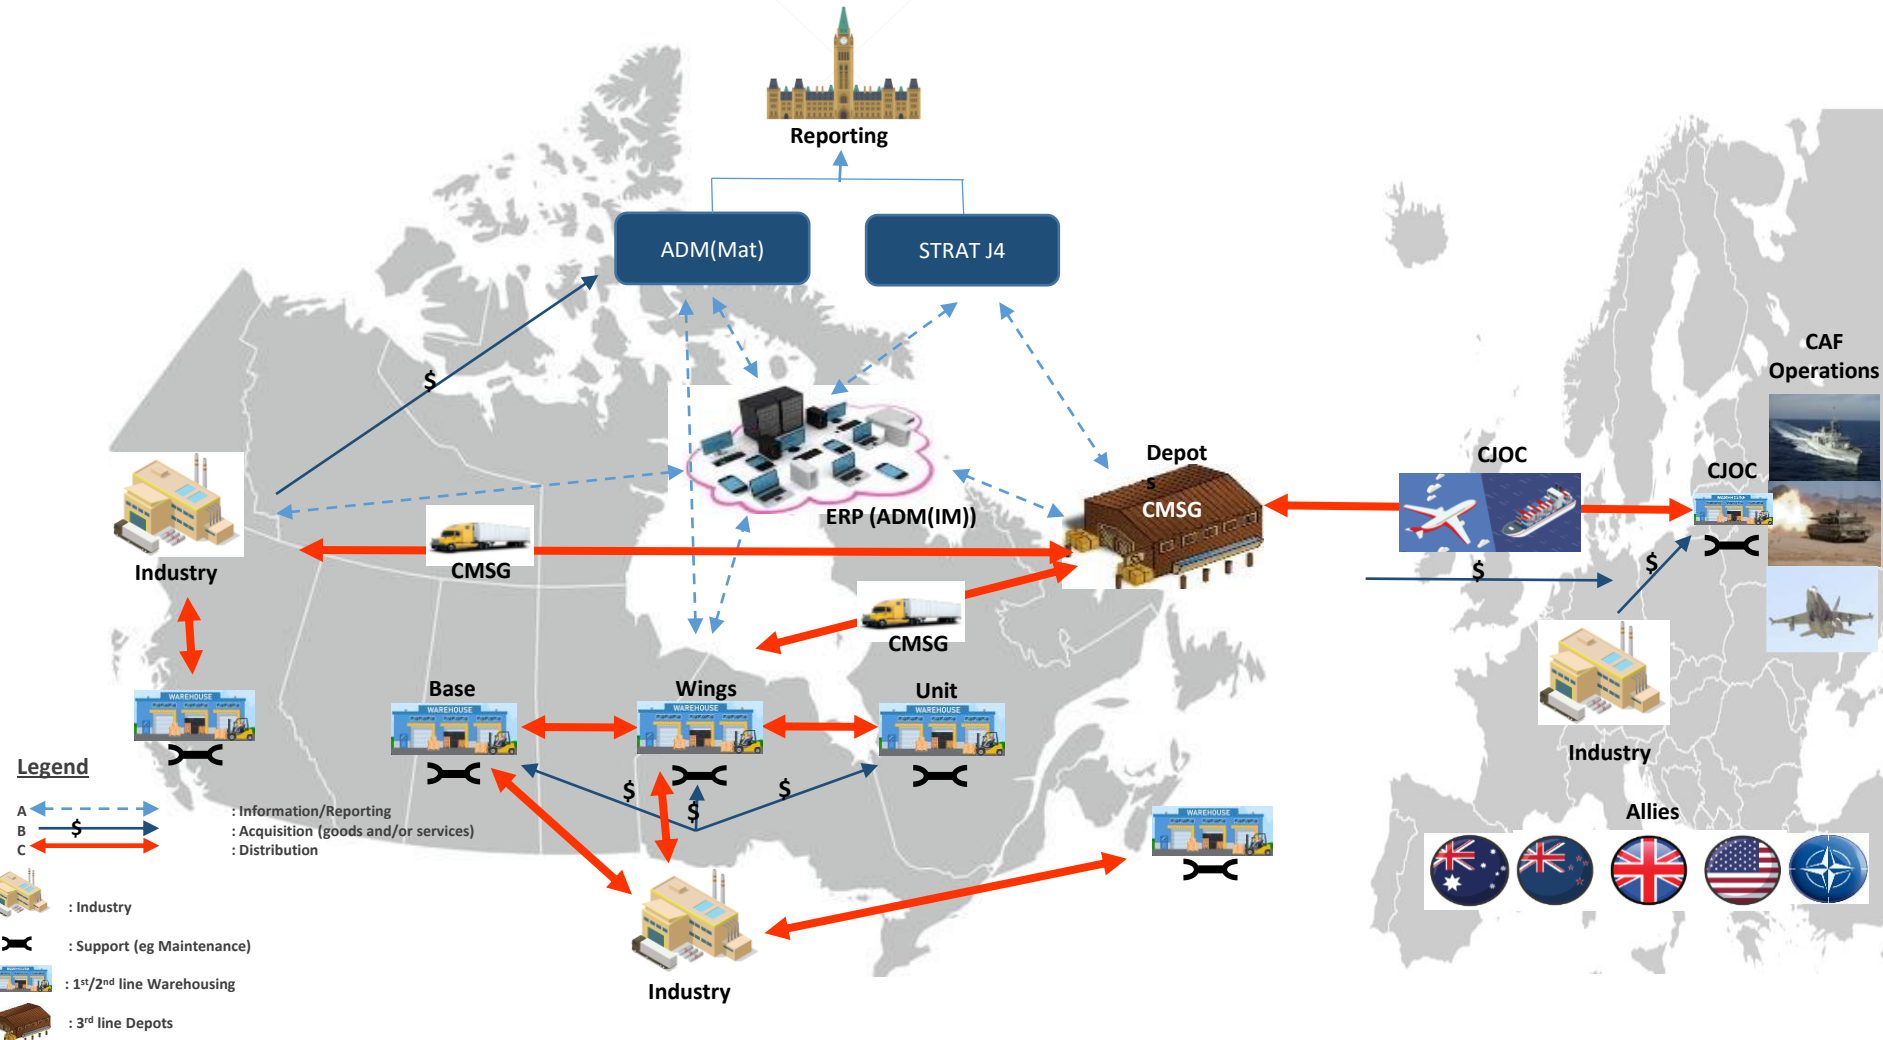

Materiel Accountability

~ 600M stocked items ~ \$6B inventory & ammo ~ \$74B assets & weapon systems

Event code: DSC**

# SLIDO #3-1:

## The Importance of DSC Attributes

What are the Top 3 DSC attributes you consider to be the MOST important?

- A) **Predictability/Stability:** minimal variability in processing times and minimal churn in demand and supply objects, dates and quantities – minimization of this factor will lead to predictable deliveries.
- B) **Throughput:** The velocity of information, demands and materiel through the Supply Chain – high velocity serves to maximize service levels
- C) **Optimal Service Levels:** Optimization of demand turnaround time considering available finances/operational criticality
- D) **Optimal Inventory Levels:** Levels are neither tool high nor too low. Inventory is in place in the anticipated area of demand (i.e. the right place)
- E) **Data/Information Accuracy:** Definitions are agreed to by all organizations and data/information is error free and complete
- F) **Responsiveness/Agility:** Speed of response to demand changes (e.g. points of demand, quantities, dates, etc) and the ability to anticipate change patterns and trends

**ANSWER:** No Correct Answer. This SLIDO is intended to demonstrate the importance of having baseline KPIs to enable the observation of trends and measured levels of performance against established targets so as be able to improve DSC performance

# Module 3G - DSC Business Execution

## MAIN TOPICS

- A. Core Supply Chain Concepts, Goals and Operation
- B. **Integration in the DSC**
- C. Materiel Requirements Planning (MRP) Concepts
- D. Roles & Responsibilities
- E. IT Systems & Tools
- F. Enabling the Smooth Flow of Data and Materiel

# Learning objectives

## Module 3 – DSC Business Execution Section B. Integration in the DSC

At the end of this Section, you will be able to:

- Define Integration and list the types of Integration
- Explain that the DSC needs to be Integrated by Design and not by Consequence and why
- Elaborate on the benefits of Integration
- Identify the key integration points between MM and PM

# VCDS Open Letter to LIs (Oct 2020)

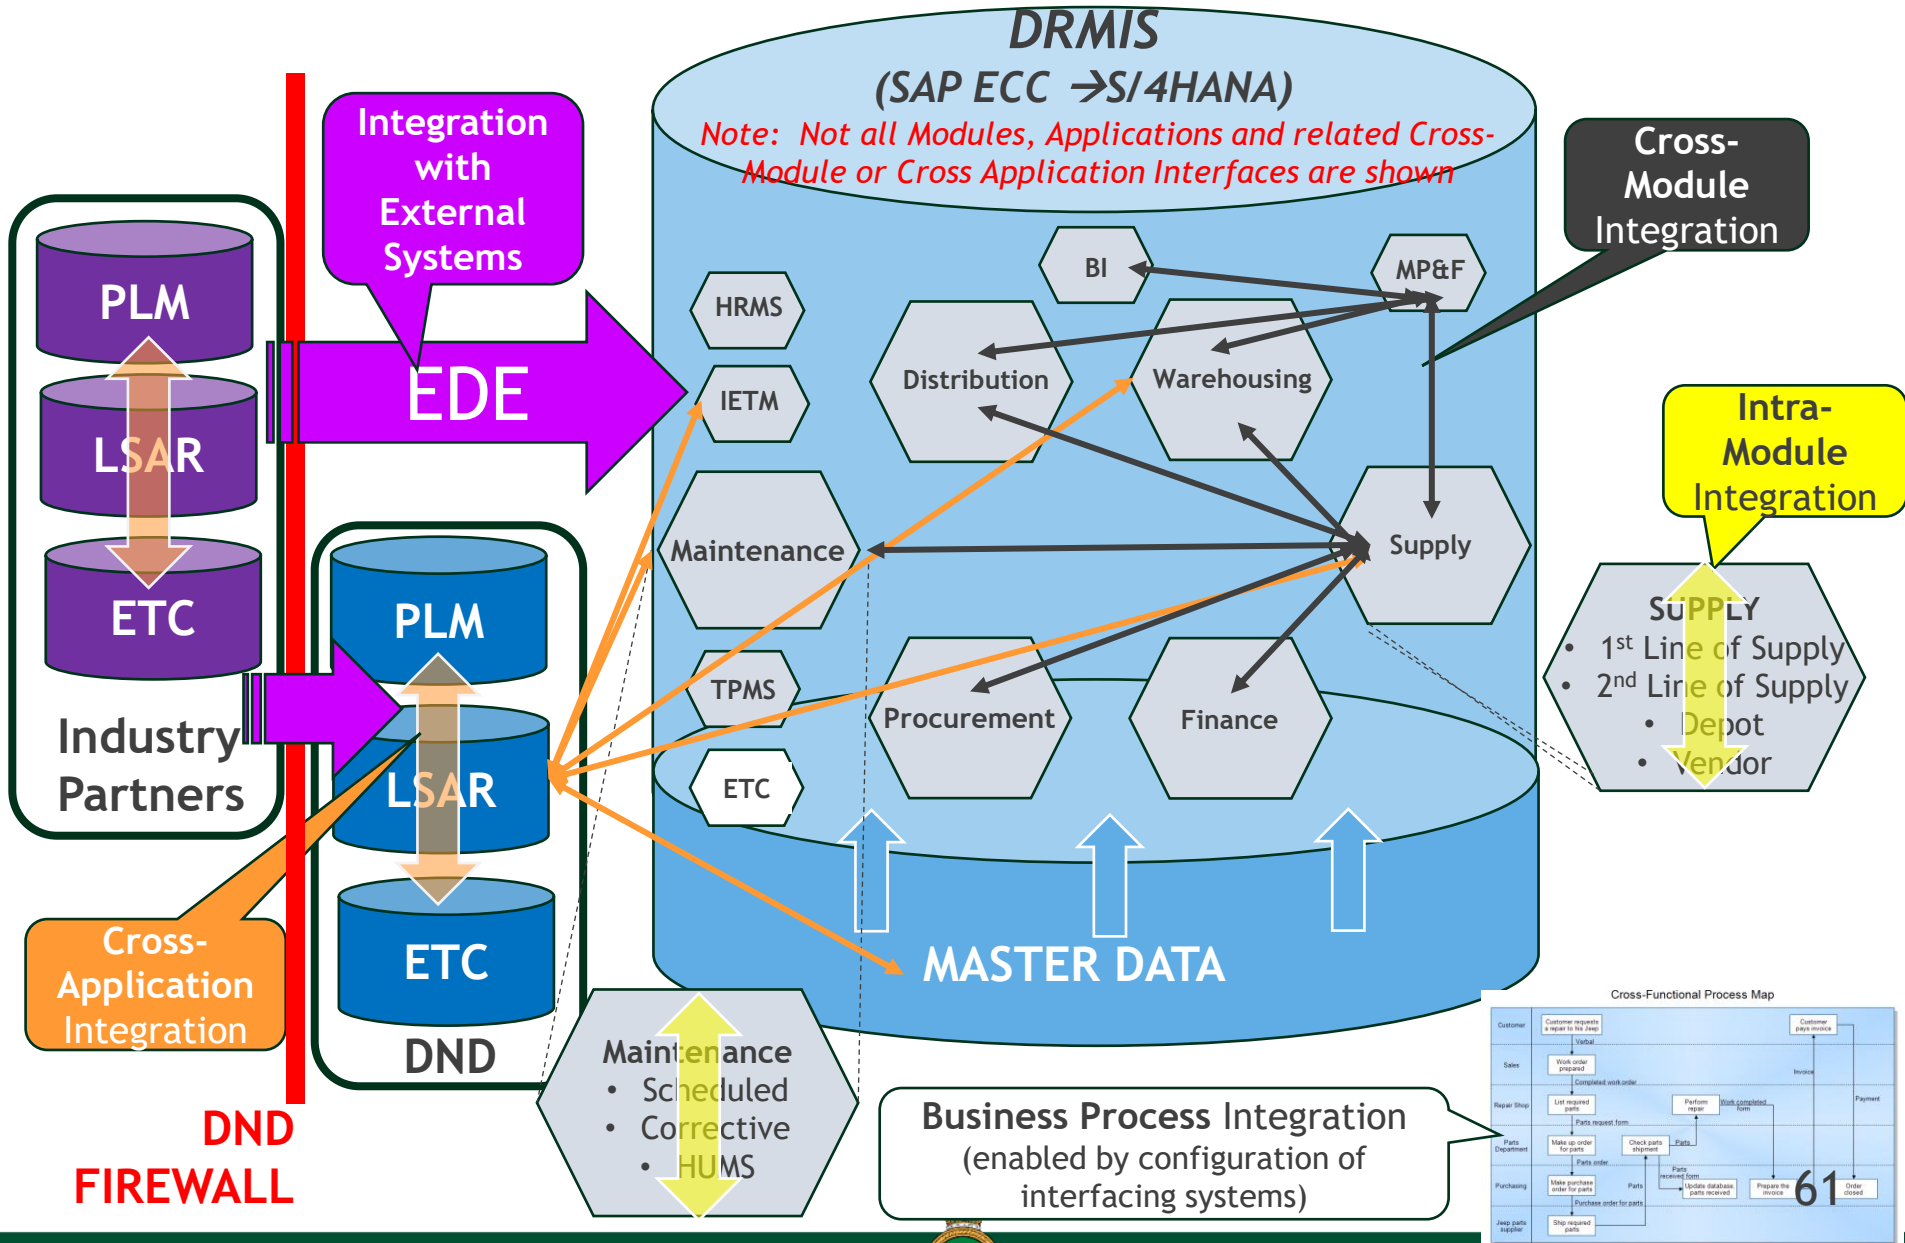

We need to demand more integration. 'a thing' ; to be stitched up later. 'They'll do that.' Folks, we are them and we have the watch.

Integration shall become increasingly THE central HLMR deep into migration exercise. we must truly begin integrating our systems - of - systems into a coherent CAF combat system that can see, recognize and exploit across boundaries. And if that means that buying the integration means one less thing can be acquired, then so be it. If we continue fielding a better version of our connected and sustainable CAF future system.

We must resulting in a Pan Domain CAF by design and smart - not by consequence our bright and capable majors and down need to show greater influence on the outcomes we desire. Leaders need to engage more, dialogue across silos more, see the bigger picture more clearly and drive outcomes.

# Integration Requirements within the DSC

# Benefits of Integration

- ✓ Information is readily shared between business processes/DSC actors
- ✓ Improved Agility and Efficiency
- ✓ Trusted Data (i.e. Accurate and Complete)
- ✓ Reduced IT investment and costs
- ✓ Enables Automation of some Business Processes
- ✓ Improved motivation/sense of accountability

**Without integration the opposite of the above will be realized.**

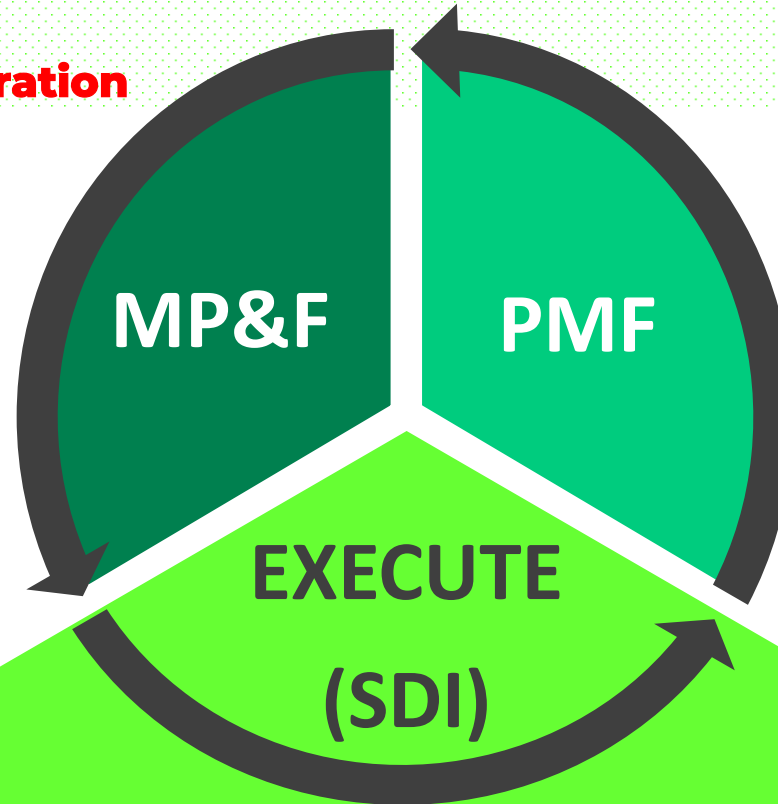

# Key Integration Points between Supply (MM) and Demand (PM)

## Supply Demand Integration

MP&F to feed MM with anticipated demand:

- Planning Parameters (ROPs etc.)
- Treatment of Sporadic and Intermittent Demand
- Supply re-distribution and repair recommendations

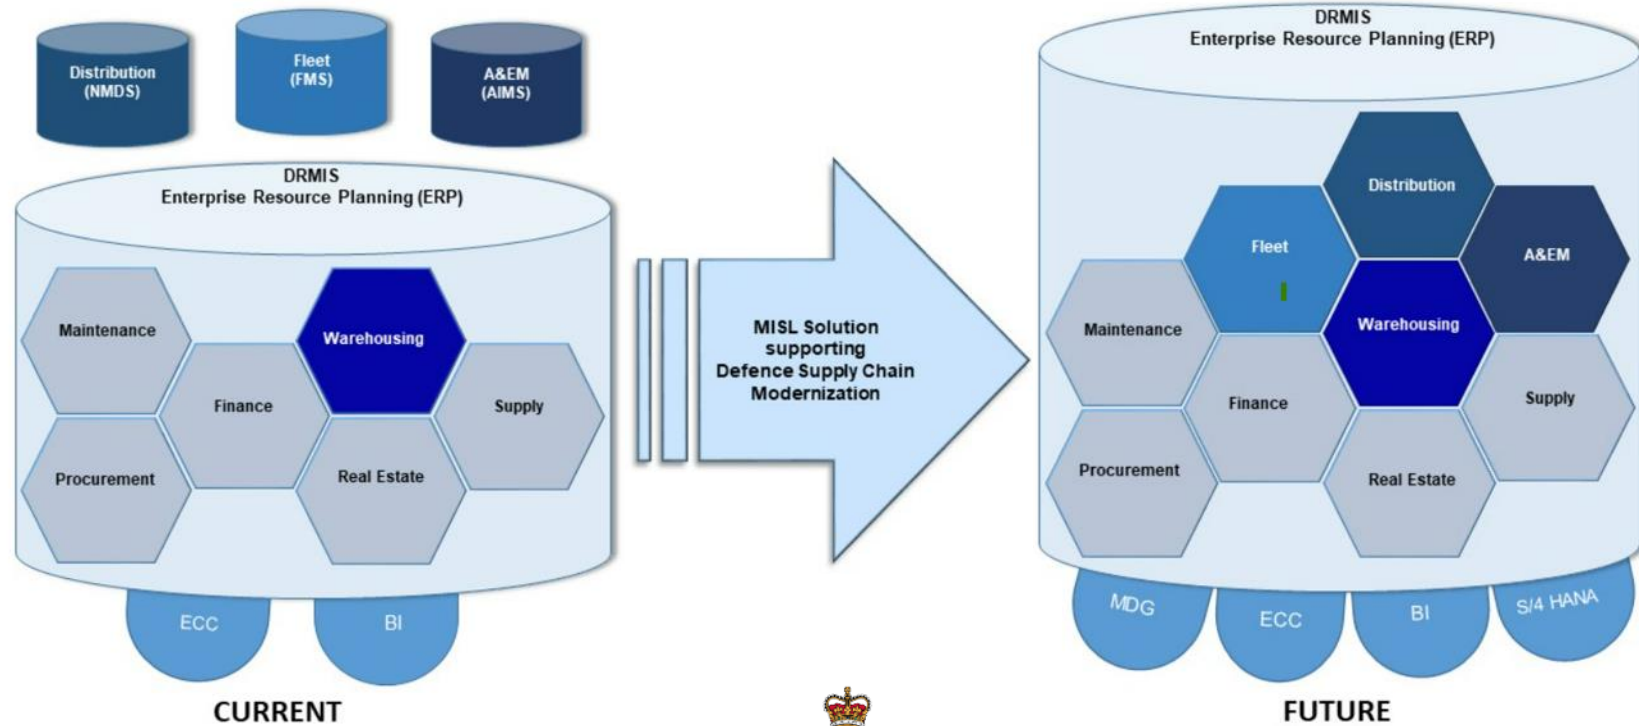

PMF transforms transactional data from PM/MM into KPIs and other health indicators to enable performance-based decision making and for use by MP&F

- MRP Responds to various sources of actual demand AND receives and responds to anticipated demands from MP&F
- Responds to direct procurement requirements (text buys)
  - ATP determines which demands get satisfied first
  - Both MM and PM data can be viewed to provide an integrated view

# Modernization & Integration of Sustainment and Logistics (MISL)

MISL is an Enterprise Modernization Initiative (EMI) part of the Defence Resource Business Modernization (DRBM) Program to improve effectiveness and efficiency of the Defence Supply Chain (DSC).

As part of this modernization, MISL will **integrate** functionality of stand-alone logistics systems (NMDS, FMS, AIMS,) and enhance current DRMIS functionalities **into a robust, integrated SAP ERP for Warehousing and Distribution (W&D) within the Defence Supply Chain (DSC).**

## Activity 3-2

**Join at [slido.com](https://www.slido.com)  
Event code: DSC**

## SLIDO #3-2:

SAP is promoted for its built-in cross-module integration; however, the actual level of integration is a function of set-up. For DRMIS ECC, which of the following are TRUE when it comes to integration between PM and MM ?

- A) The requirement date in supply documents is the same as that in Work Orders
- B) It is clear from supply demands which are for vehicles that are grounded.
- C) The priority of a supply demand triggered by a maintenance work order is taken directly from the priority in the work order.
- D) The supply system is set-up to distinguish between the relative importance of work-order demands (e.g. one required to support a deployed mission vs one for a ROP).

E) B and D are TRUE

**(F) Is the correct answer. All are FALSE indicates the need to improve integration within DRMIS so that the ULTIMATE benefit can be realized - the Right Part is delivered for the most important requirement in a timely fashion.**

# Module 3G - DSC Business Execution

## MAIN TOPICS

- A. Core Supply Chain Concepts, Goals and Operation
- B. Integration in the DSC
- C. **Materiel Requirements Planning (MRP) Concepts**
- D. Roles & Responsibilities
- E. IT Systems & Tools
- F. Enabling the Smooth Flow of Data and Materiel

# Learning objectives

## Module 3 – DSC Business Execution Section C. Materiel Requirements Planning (MRP) Concepts and Special Topics

At the end of this Section, you will be able to explain:

- The difference between MRP and ATP
- What constitutes a demand vs supply and types
- How MRP works at a high level including how it schedules to satisfy demands
- MRP Areas and Lines of Supply

# What is Materiel Requirements Planning (MRP)?

MRP is a capability within SAP ECC that enables the system to *maintain an equilibrium between demand and supply*. It attempts to efficiently utilize inventory and deliver the right product on time.

When demand exceeds supply, MRP will create Order Proposals, usually in the form of PReqs (Purchase Requisitions)

When supply exceeds demand, MRP will attempt to delete the excess supply elements

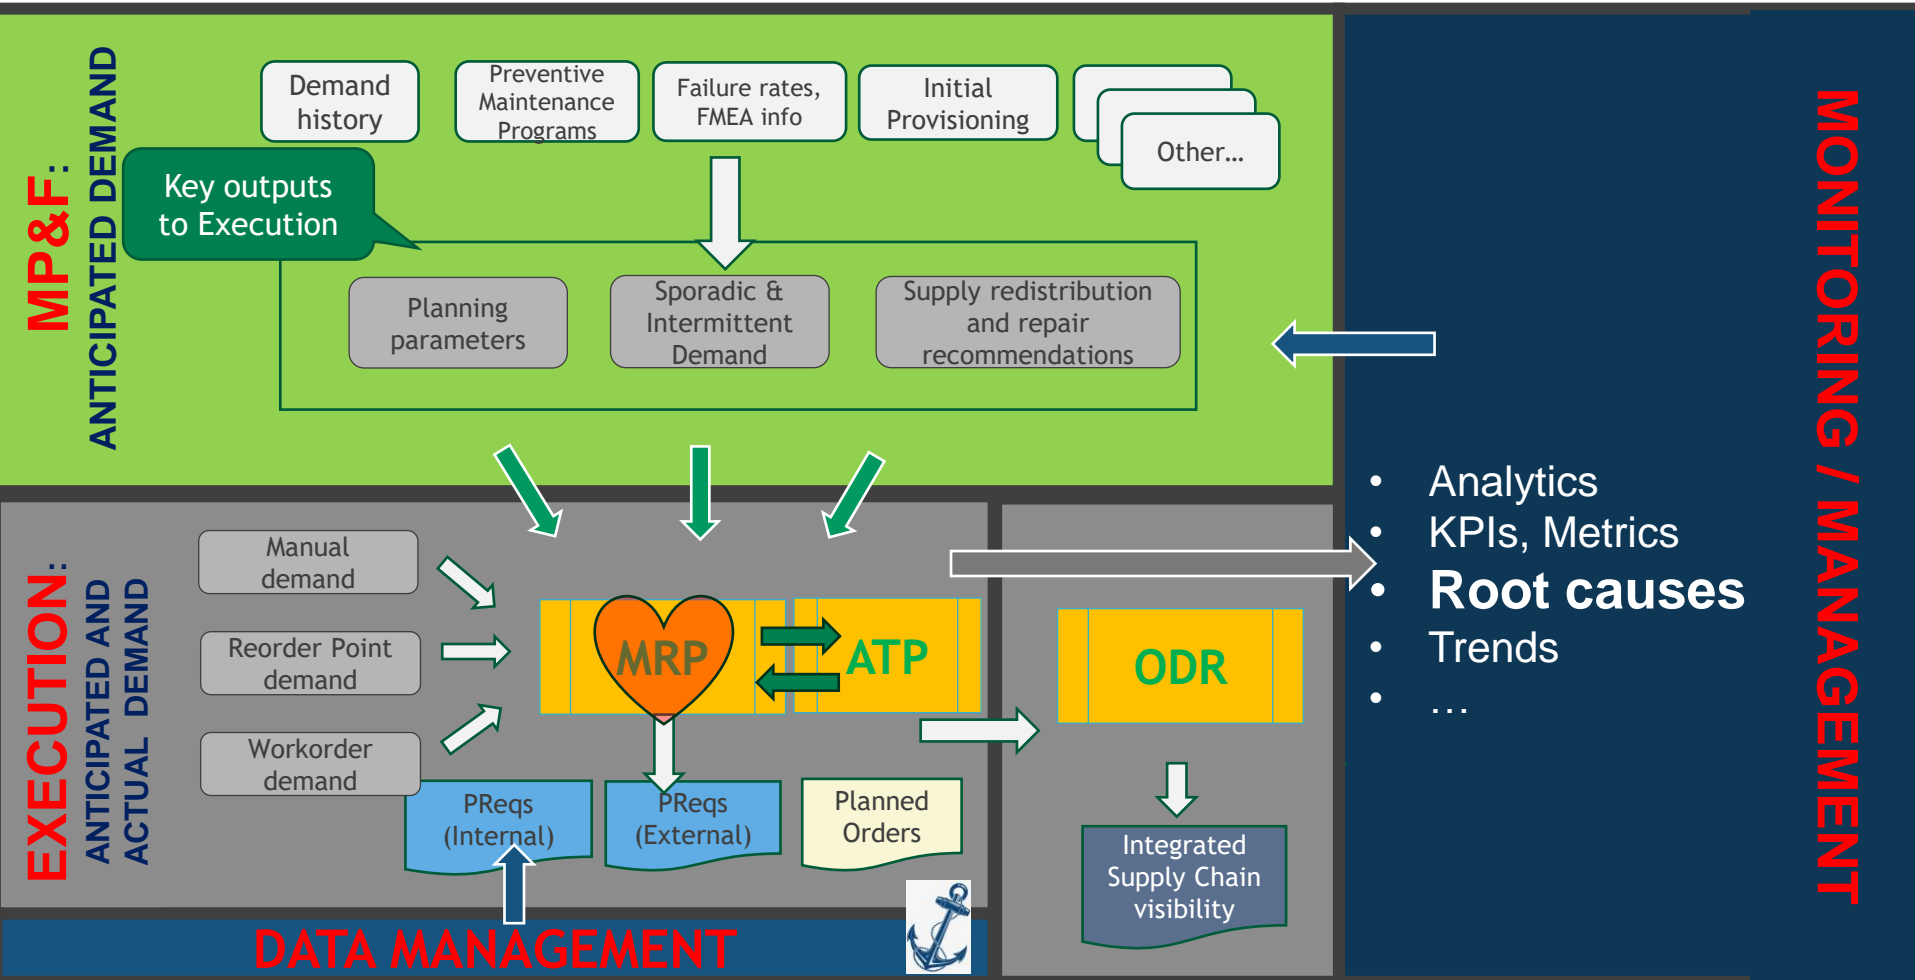

## NOTES

- MRP runs at least once a day as a batch job
- When demand quantities or dates change, MRP will attempt to make changes to the corresponding supply object

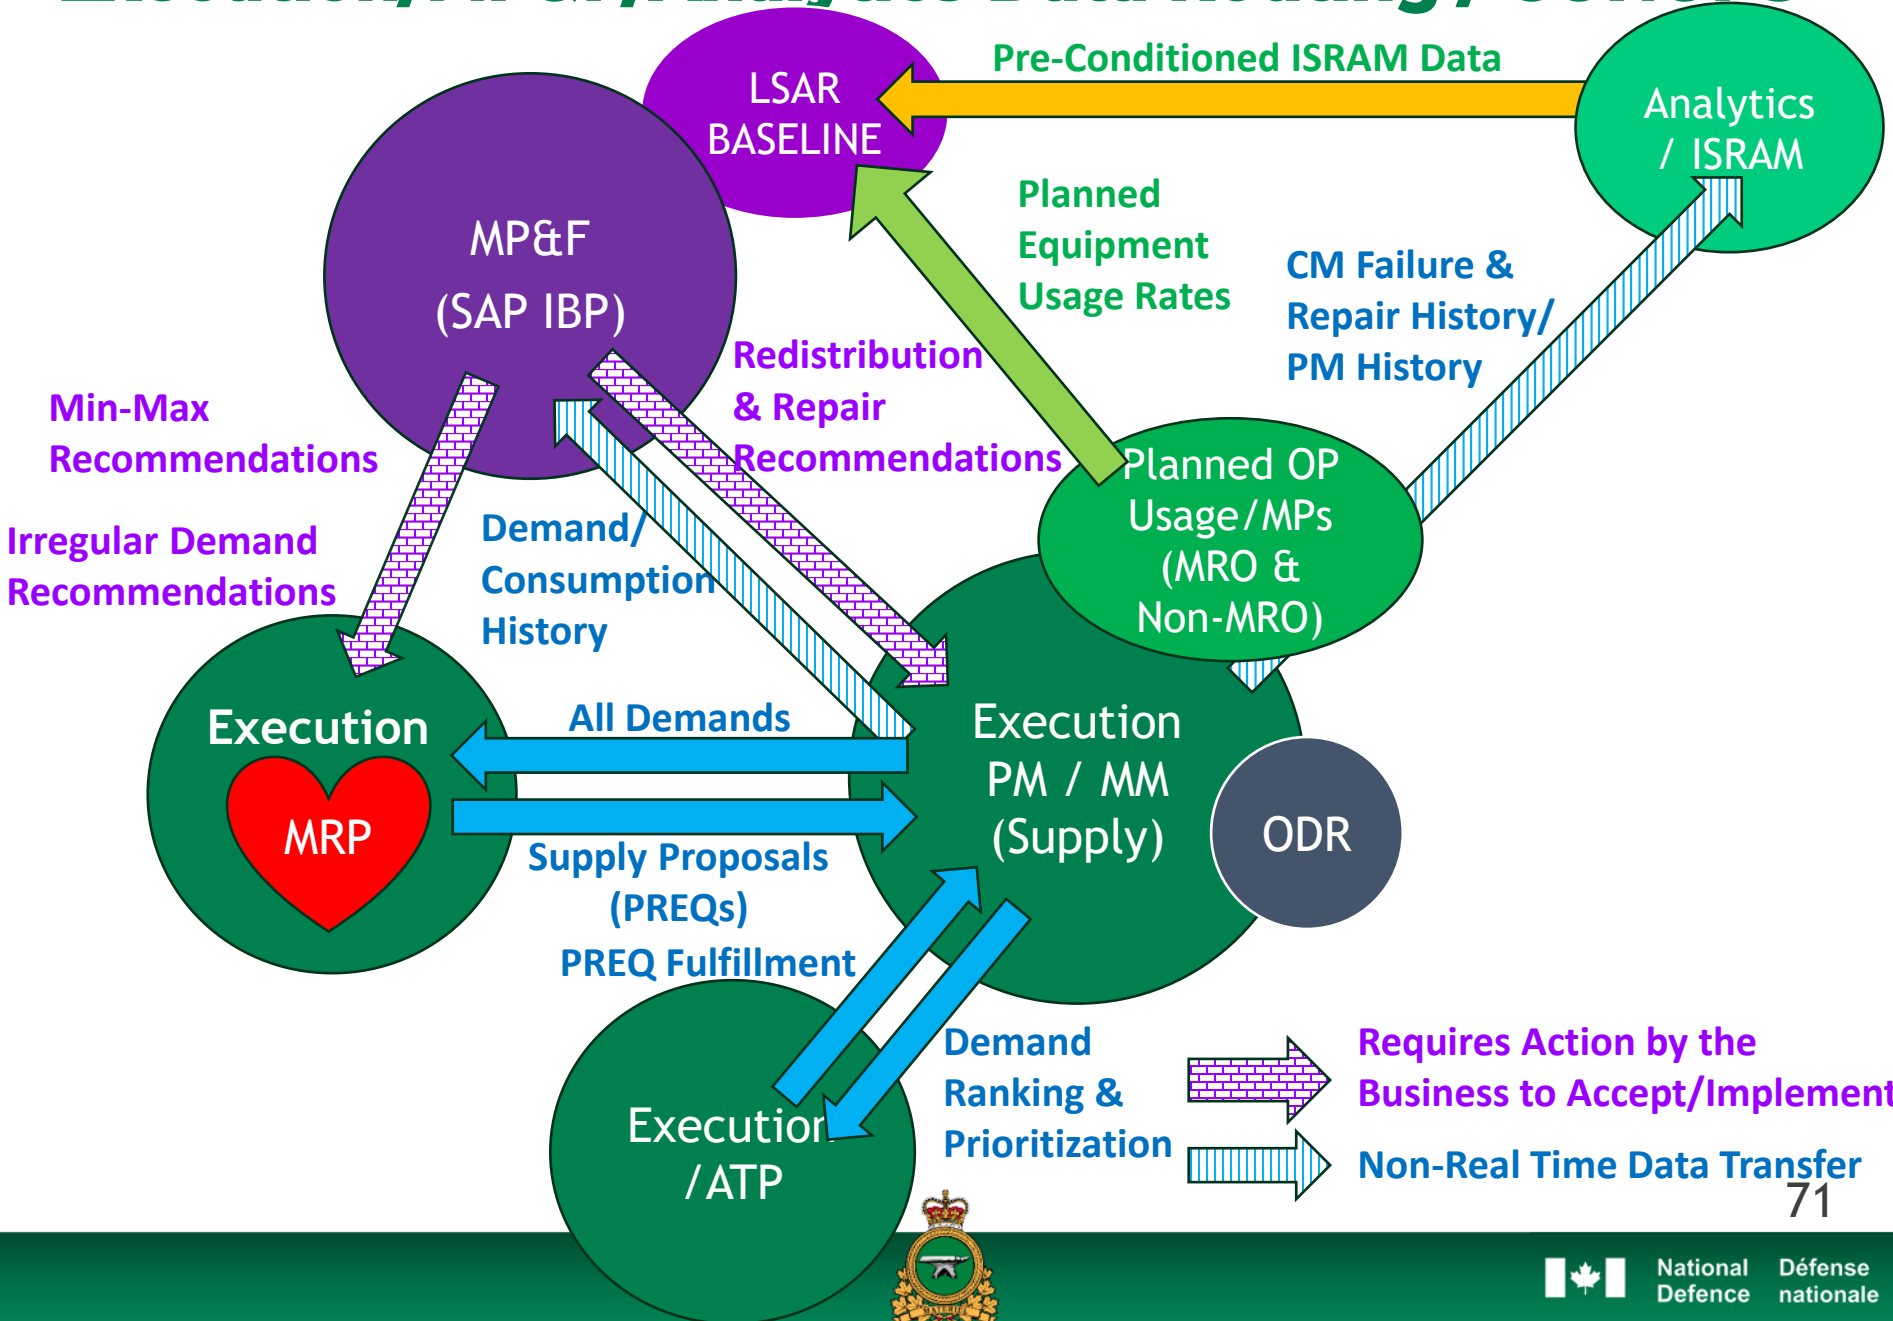

# Introduction: Core Supply Chain Concepts, Goals and Operation

## A Defence Supply Chain Model

# Execution/MP&F/Analytics Data Routing / CONOPS

# Terminology: Demand vs Supply

**DEMAND:** Any request for a materiel that needs to be processed, that may result in the creation of a corresponding supply.

**SUPPLY:** Stock and any incoming receipt into stock is considered as being supply. Created automatically by MRP, other system processes or created manually.

**Actual Demand:** One which, when issued, will immediately satisfy the demand.

Type of demand	1 <sup>st</sup> line/FMF	2 <sup>nd</sup> line/BLOG	Depot
PM workorders	X	X	
PP workorders		X	
Manual	X	X	X
Ships - deployed		X	
Internal Preqs/STOs (originator)	X	X	

**Anticipated Demand:** One which is in advance of the creation of an Actual Demand. This demand type permits the pre-positioning of materiel so that fulfillment rates are substantially increased when the actual demand is eventually created.

Note: PIRs are not currently used at DND but may have a future use

Type of demand	1 <sup>st</sup> line/FMF	2 <sup>nd</sup> line/BLOG	Depot
Reorder Point (min-max)	X	X	X
Forecast (PIRs)	X	X	X

## Common forms of supply:

- Quantities in stock
- Purchase Requisitions (PReqs)
- Stock Transport Orders (STOs)
- Purchase Orders (P/Os)
- Schedule Lines (from Scheduling Agreements – rarely used by DND)
- Shipping notifications
- Planned Orders - not currently used, but may have a use in future Materiel Planning & Forecasting (MP&F)

*Note: The output of repair workorders are also considered by ECC as supply (e.g. when items are being returned from R&O contracts)*

# Demand vs Supply in Transaction MD04

Demand = Negative Value

Supply = Positive Value

# MRP Types

- PD – Standard MRP Type
  - No min or max value
- Z1 – MRP Type for Reorder Points with External Requirements (Min/Max)
  - has a characteristic that PD does not have: the ability to pre-position materiel in advance of actual demand
  - it does this by reacting when the inventory quantity for an item drops below its Reorder Point (i.e. “min”) but will also have visibility to other demands when calculating a replenishment quantity.
- ND – No planning

# MRP Type = Z1 Example

External Requirements ConRel = STO

Order Quantity Calculation  
 = (max level - in-stock quantity - total On-Order Quantity) + total external requirement quantity  
 = (60 - 0 - 0) + 39 = 99

Projected end-quantity on hand after external requirements are satisfied (EOH = Max Value) 75

## Activity 3-3

**Join at [slido.com](https://www.slido.com)  
Event code: DSC**

# SLIDO #3-3:

## Confirm Understanding of Z1 MRP Type

### Home Inventory Example:

In your home pantry you want a min/max of 2/4 bags of sugar, and the level drops to 1 bag, but you need 5 additional bags for an upcoming event. If your household pantry inventory was managed by a Z1 MRP type how many bags of sugar would be ordered?

- a) One (1)
- b) Four (4)
- c) Eight (8)
- d) Nine (9)

### Correct Answer:

(c)  $\{(Max - Quantity\ in\ Stock - on\text{-}order\ quantity) + External\ Requirements\}$   
 $= \{(4 - 1 - 0) + 5\} = 8.$

If MRP Type = PD (i.e. no min or max value) then answer (b) would be correct:

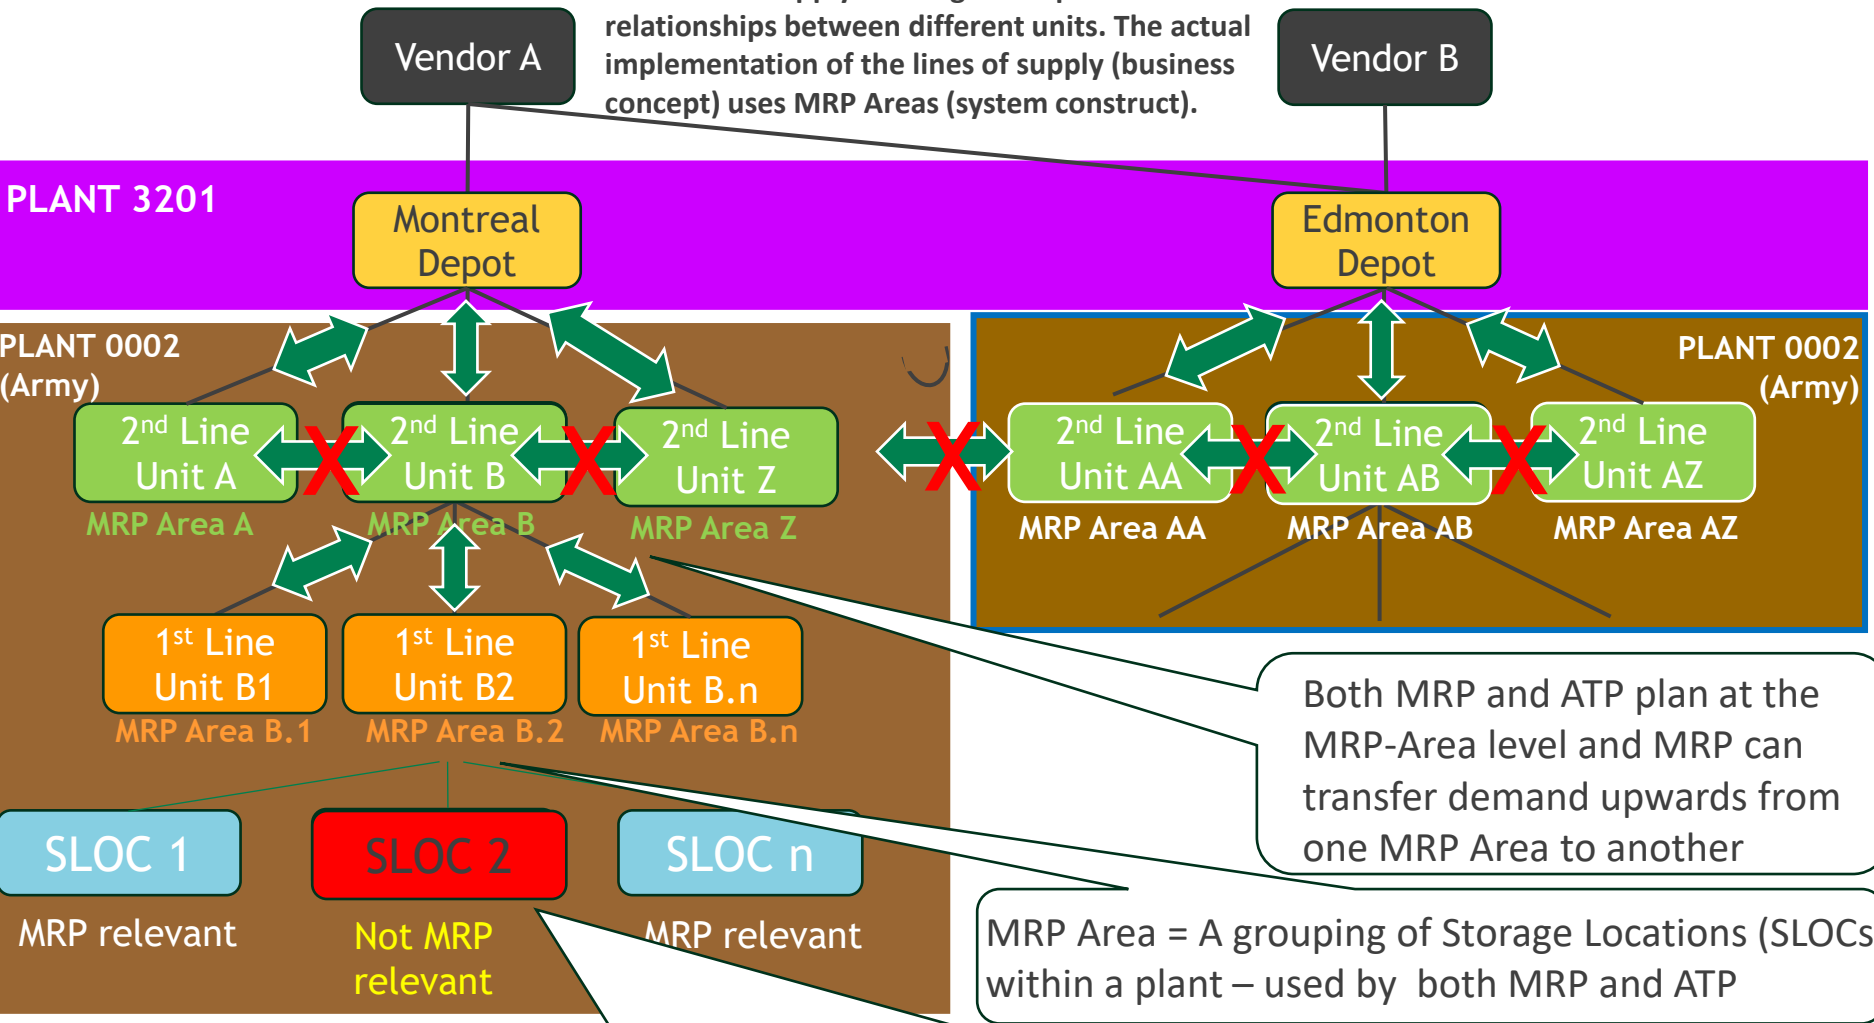

$\{Demand - (Quantity\ in\ Stock + On\text{-}Order)\} = \{5 - (1 + 0)\} = 4$

77

# MRP Areas and Lines of Supply – Use by MRP and ATP

The lines of supply have rigid and predefined relationships between different units. The actual implementation of the lines of supply (business concept) uses MRP Areas (system construct).

Both MRP and ATP plan at the MRP-Area level and MRP can transfer demand upwards from one MRP Area to another

MRP Area = A grouping of Storage Locations (SLOCs) within a plant – used by both MRP and ATP

**Some SLOCs in an MRP Area may be blocked to MRP**

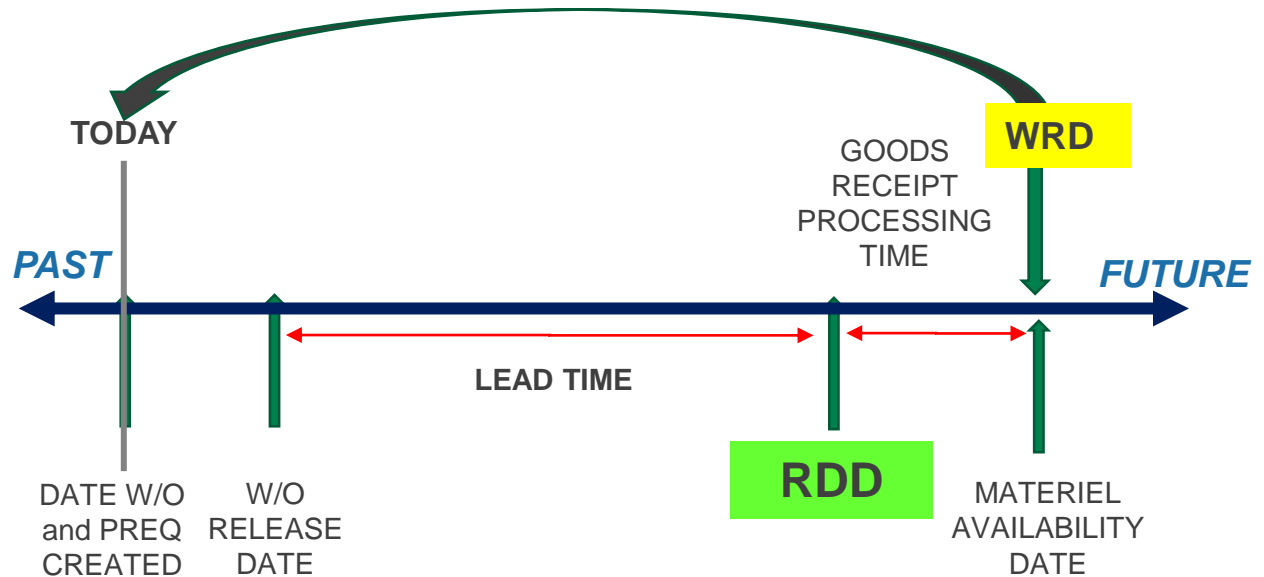

- Most commonly MRP-blocked SLOCs are used to store unserviceable materiel
- Both MRP and ATP ignore blocked-to-MRP SLOCs

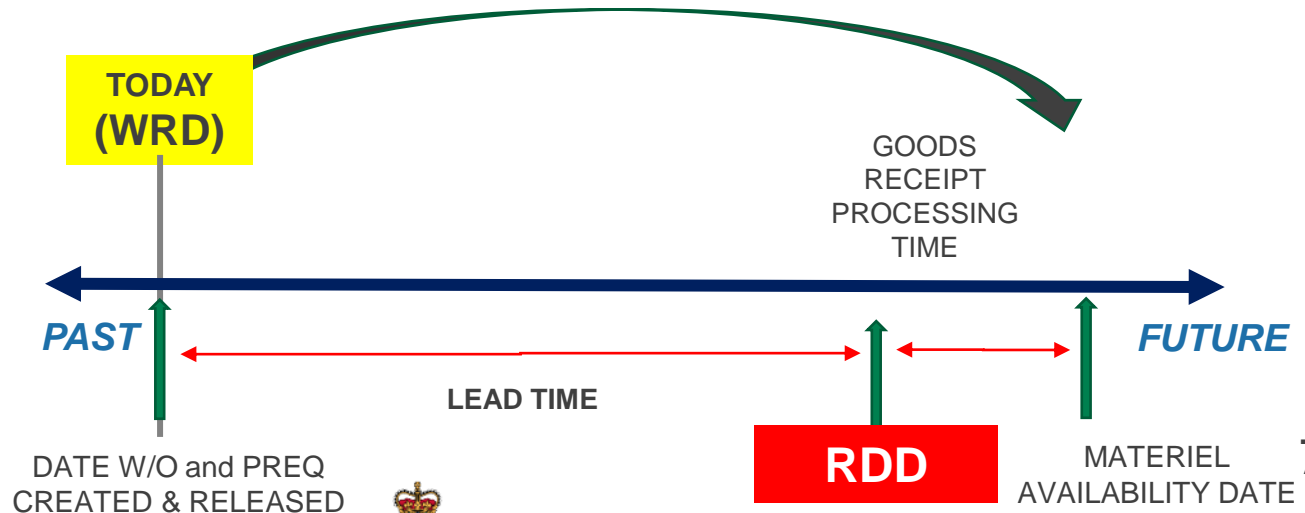

# Why WRD and RDD are Mis-Aligned in ECC

MRP will attempt to schedule Order Proposals in time to meet the demand date, but this is not always possible (e.g. when the demand date has a shorter timeframe than the time it takes to obtain the material)

**Backwards Scheduling**  
(E.G. Preventive Maintenance)

**Forward Scheduling**  
(E.G. Corrective Maintenance)

# What MRP Considers in its Calculations

- ✓ All demand elements for a given MRP Area (serviceable material only)
  - ✓ All Supply elements for a given MRP Area (serviceable material only)
  - ✓ Stock types
  - ✓ Master Data:
    - The lead time of the materiel
    - The MRP Type
    - {Other elements}
  - ✓ ECC configuration of MRP parameters
- ✗ Quantities committed (or not) by ATP
  - ✗ IMA Code and any other custom fields
  - ✗ Whether or not a materiel is batch managed or serialized
  - ✗ The priority of the demand
  - ✗ The priority of supply objects
  - ✗ MRP does not carry over supply priorities from one Supply Chain level to another

## Important Notes:

- Some consider the inability of MRP to “pass on” workorder priorities to supply, or even supply priorities from one supply echelon to another, as being an inadequacy.
- This is a misunderstanding of MRP’s purpose. SAP provides another elegant and complementary tool – ATP (Available to Promise) to provide for the capability to distribute materiel to the most important sources of demand.

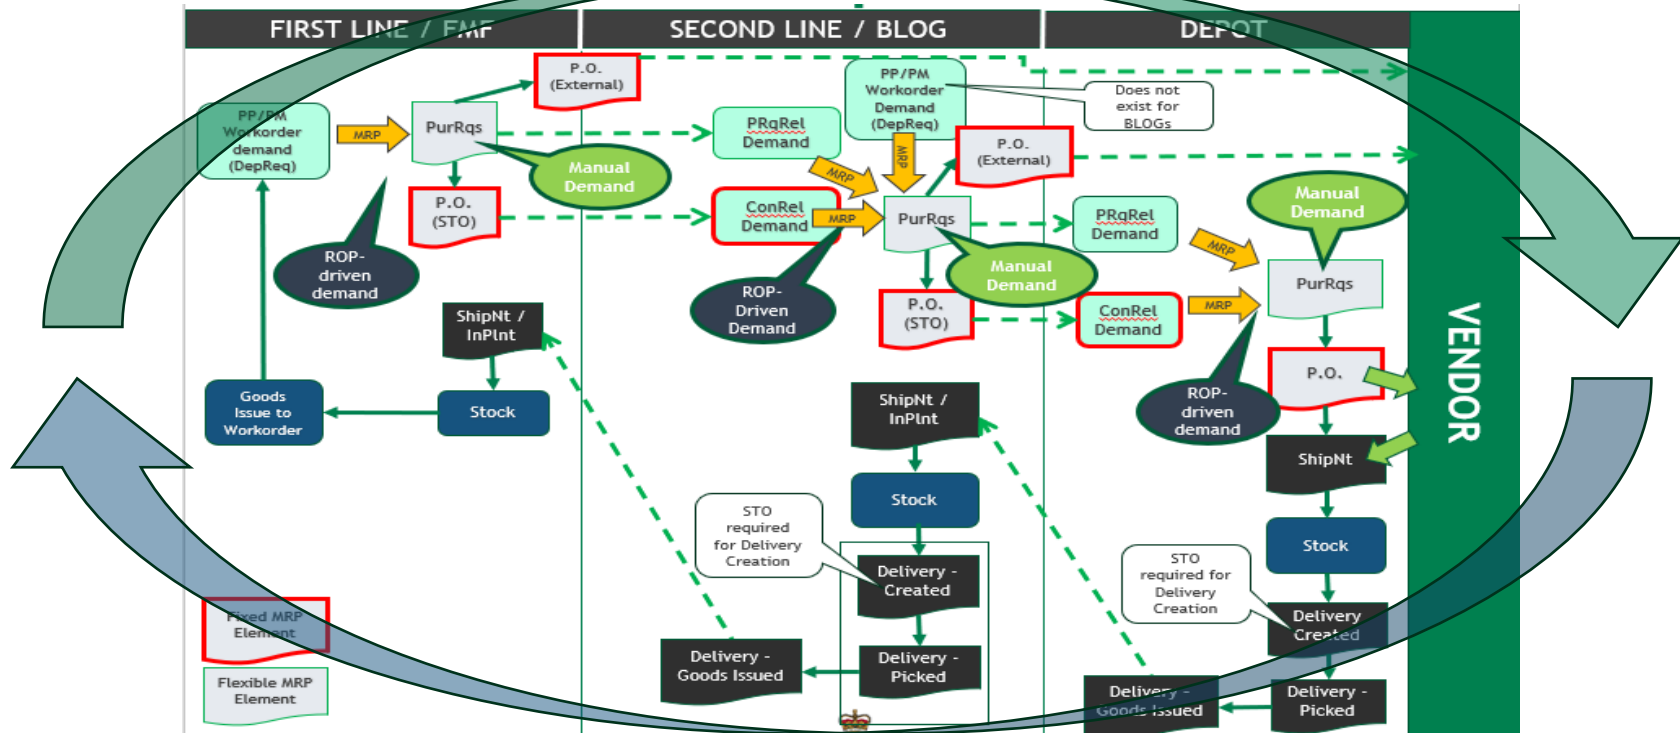

# MRP and ATP are Complementary

MRP's function is to get material into stock.

ORDER MANAGEMENT: Main Role - Material Requirements Planning (MRP)

ORDER FULFILLMENT: Main Role - Available to Promise (ATP)

ATP's function should be to direct stock to the most critical operational demands first.

**Note:** Order proposals created by MRP are not hard-linked to the source of demand.

- SAP uses a technique called “Pegging” to match supply to demand.
- Pegging should be used by ATP to determine the source and importance of the demand. Materiel can then be distributed then by demand importance.

# Module 3

## Question & Answer (Part 1)

**Join at [slido.com](https://slido.com)**  
**Event code: DSC**

# Module 3G - DSC Business Execution

## MAIN TOPICS

- A. Core Supply Chain Concepts, Goals and Operation
- B. Integration in the DSC
- C. Materiel Requirements Planning (MRP) Concepts
- D. Roles & Responsibilities**
- E. IT Systems & Tools
- F. Enabling the Smooth Flow of Data and Materiel

# Learning objectives

## Module 3 – DSC Business Execution Section D. Roles & Responsibilities

At the end of this Section, you will be able to:

- Provide an overview of the different roles involved in the DSC
- Identify key materiel manager actors and describe their main responsibilities

# Applicable Definitions (from the SAM)

- **Roles:** functions performed by someone in a particular situation, process, or operation:
  - are the standardized grouping of tasks and responsibilities assigned to individuals *in order to carry out specific functions on behalf of the organization*
- **Responsibilities:** something that one is required to do *as part of a job, role, or legal obligation*
- **Authority:** the legal right to make decisions, transmit intentions to subordinate commanders and impose one's will on subordinates

# Levels of DSC Roles

## Governance

ADM(Mat) is the SDO for DND/CAF as per Treasury Board Directive for Materiel Management and has functional authority over:

- Materiel acquisition & support, including divestment
- Materiel management and inventory management, including write-off
- Materiel assurance
- Procurement & Contracting
- Controlled Goods
- Project Management policy-held jointly with VCDS

## Materiel Managers

Within the DSC Materiel Management includes the decision-making activities necessary to Plan, Acquire, Position, Maintain and Divest of materiel throughout the materiel's lifecycle. A Materiel Manager is a person or organization charged with identifying and coordinating materiel requirements, technical specifications and other elements of life cycle management.

## Materiel Custodians

Materiel Custodians are the personnel or organizations charged with the custody, security and stewardship of materiel. Materiel custodians have the materiel physically within their storage locations and warehouses and are generally responsible for the safe keeping, accountability, distribution and reporting of that materiel until it is issued for use or actioned for divestment.

## Materiel Users

Materiel Users are the organizations and individuals who either hold and operate military materiel assets or otherwise consume materiel during routine operations.

## Activity 3-4

**Join at [slido.com](https://slido.com)  
Event code: DSC**

## SLIDO 3-4: Specific DSC Roles

**Which DSC role(s) is formally defined in the Supply Administration Manual (SAM)?**

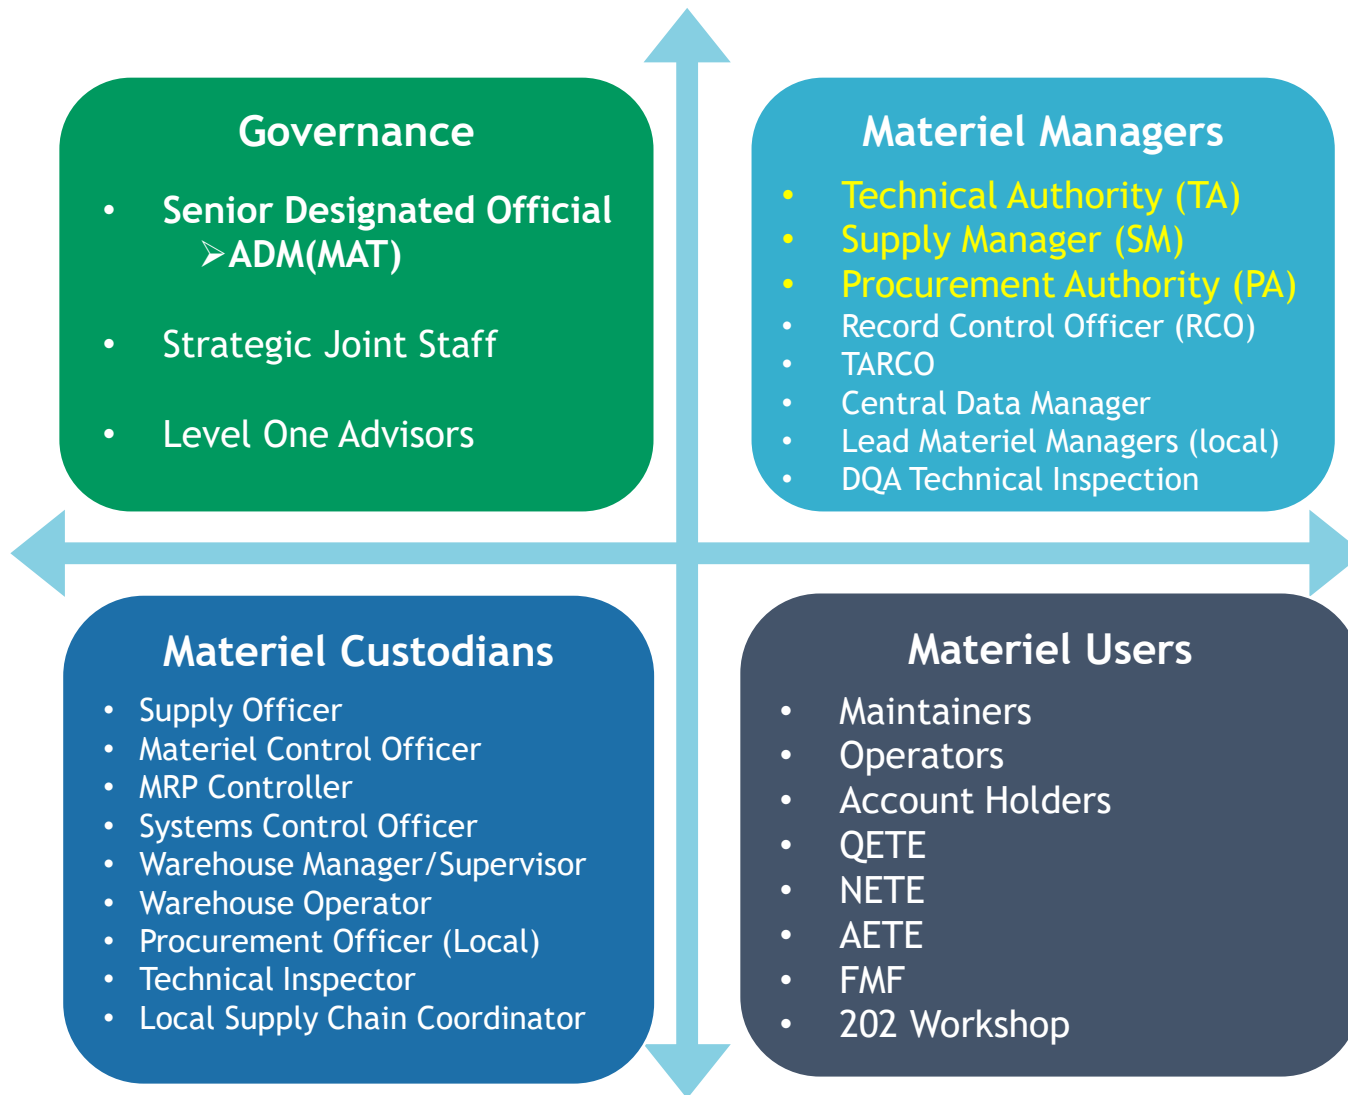

- a) Supply Manager
- b) Supply Technician
- c) Life Cycle Materiel Manager
- d) Technical Authority
- e) Procurement Authority
- f) None of the above

**Correct Answer is: (a), (d) and (e)**

# DSC Roles within Levels

# Responsibilities and Main Tasks for Key Materiel Management Roles

Responsibilities/Tasks		Technical Authority (TA)	Supply Manager (SM)	Procurement Authority (PA)
 <p><b>Responsibilities</b></p>		<ul style="list-style-type: none"> <li>manages materiel during its in-use life cycle to ensure the right materiel is available for ops</li> <li>set tech specs and standards</li> <li>manage configurations</li> <li>provide technical advice</li> <li>monitor compliance within their area of responsibility</li> </ul>	<ul style="list-style-type: none"> <li>manages centrally managed materiel and equipment to ensure the right materiel is in the right location at the right time in the right quantities</li> <li>work in close conjunction with their PA and TA counterparts.</li> </ul>	<ul style="list-style-type: none"> <li>execute procurement activities in accordance with the direction and guidance provided within the Procurement Administration Manual (PAM)</li> <li>enable appropriate materiel management and custodial management after procurement.</li> </ul>
 <p><b>Key Tasks</b></p>	<b>Materiel Planning</b>	MI, MP&F (Anticipated Update)	MP&F (Max and Min levels depots and throughout DSC for all centrally managed materiel), MI	MP&F (Budgeting perspective)
	<b>Acquisition</b>	Technical Data Package, FFF	Positioning, procuring (with PA), ASNs, discrepancy management	Ensuring materiel can be received by the depot, PAM Procurement activities
	<b>Materiel Management</b>	Repair authority, shelf life, CFTOs, Serial # tracking, obsolescence	Movement of restricted items, holdings review, dormant stock, High Priority Requests (HPRs)	Dues in, ASN, discrepancy management, proper clauses Note: Procurement must be done in DRMIS MM Module, using the correct Account Assignments
	<b>Maintenance</b>	NIL	Contracts, SNAPS, HPRs/Op Defs	NIL
	<b>Divestment</b>	1303, 4001 Forms, Analysis	Analysis, Action	NIL

# ERP Reporting vs Enterprise Dashboards/Analytics

## ERP Reporting

ZEPM\_  
ODR

Other  
T-Code  
Reports

- Micro (Tactical) View
- Focus on Task execution (Real Time)
- Tactical Performance-Based Tools/Dashboards (for Working Level)

## Enterprise Dashboards/Analytics

- Macro (Strategic) View
- Reveals historical **Enterprise** systemic “pain points” and trends
- Tailored KPIs and Metrics
- **Enterprise** Performance (Executive/Manager/Fleet Level)

# ZEPM\_ODR vs Other **KEY** DRMIS T-Code Reports

T-CODE	TITLE	DESCRIPTION	ZEPM_ODR*
IE36	CFR	Provide list of Fleet Equipment. Equipment data includes general data, serial number, Licence Plate.	YES
IH08	DRMIS EMR	Provide list of Equipment (EMR). Equipment data comprises general data, serial number data, location data.	YES
IW39	RMA W/O (Work Center)	Provide external repair Report of type R01 & R02, by Work Center.	YES
MB25	RESERVATION	Provide Report of Depots Reservations, (Manual Dues-in).	YES
MB51	DEPOTS/RMA HISTORY	Provide Report of Transactions History for Depots (3201), and Repair Material Account (1000).	NO
MB51	USAGE HISTORY	Provide Report of Units Work Orders Usage.	NO
MB52	STOCK ON HAND (SOH)	Provide Report of Warehouse Stocks of Material on hand. Give an overview of the stock balances across different Plants and SLoc for a selected material. It also displays the status (unrestricted, blocked...)	YES
MB5T	STOCK TRANSFER ORDER (STO)	Provide Report of Stock in Transit (STO), To view the stock in transit in various statuses or life cycle stages.	YES
ME2N	PURCHASE ORDER (CONTRACTS)	Provide Report of Purchase Orders of goods, status and cost from a specific Suppliers.	YES
ME5A	PURCHASE REQUISITIONS	Provide Report of Purchase Requisitions, Customer Demands (PDO), Public Service Procurement Canada Orders (PSPC), and Recommended Order Buy (ROB).	YES
MIR5	INVOICES	Provides Report of Invoices from Purchase Orders.	NO
ZE_ME55	COLLECTIVE RELEASE OF PURCHASE REQUISITIONS	Provide Report of Collective release of Purchase Requisitions.	YES
ZEIWBK	RMA WORK ORDER (SLoc)	Provide external repair Report of movement type 261	YES
ZEMM_AGED_PO	PURCHASE ORDER (EDD)	Provide Report of Purchase order Estimated Delivery Date (EDD).	NO
ZSUPSTRIP	DEPOTS MIN/MAX	Provides Report of Depots warehouse stock levels across different Plants and storage locations.	NO
ZSUPSTRIP	DEPOTS MOVING AVERAGE PRICE	Provide Moving Average Price (MavgP), after each acquisition, average unit price is recomputed by adding the price of acquired units to the price of units in inventory and dividing by the new total number of units.	NO
ZSUPSTRIP	DEPOTS SHELF-LIFE EXPIRATION DATE	Provide Report of Depots Shelf-Life Expired items.	NO

\* YES = T-CODE IS COVERED BY ZEPM\_ODR; NO = T-CODE IS NOT COVERED BY ZEPM\_ODR

96

# ZEPM\_Outstanding Demand Report as a Key Integration Tool for Materiel Managers

- The ZEPM\_ODR is a standard DRMIS report that reflects live DRMIS data and enables DSC Actors to:
  - know the status of PReqs/POs regardless of the source of the demand
  - investigate the causes of 20+ different potential bottlenecks in the DSC
  - in many cases take immediate action to remediate bottlenecks including prioritizing actions by importance (e.g. operational impact)
- It is the only DRMIS report that:
  - matches supply to **workorder demand**
  - is capable of navigating through the Defence Supply Chain (and all the way back) to trace a 1<sup>st</sup> Line demand to where the fulfillment of the demand currently lies
  - is intended to be used by both the Maintenance and Supply communities
    - **provides a common view of the same data**
  - **Capable of determining the various sources of demand**

**Outstanding Demands Report**

## COLOUR LEGEND

### A shortage exists

The requirement has been fulfilled.

The requirement date is in the future and the supply is projected to meet the requirement date/quantity

### A future shortfall condition exists

These relate to negative quantities defined for components (items to be returned to stock).

The outstanding quantity equals the committed quantity

# Supply Manager Use Cases (enabled by ZEPM\_ODR)

## *As a Supply Manager I need to:*

- be able to work with current (live) transactional data
- know the source, type and importance of a specific demand (e.g. required for ops)
- know what bottlenecks may exist that need action on my part to resolve
- have available all relevant information to assist in making a decision to release a Preq in a timely fashion. This includes:
  - information pertaining to the source and importance of the demand which includes:
    - Whether a vehicle or aircraft is grounded (and including specific aircraft, ship or vehicle#)
    - Days overdue (from the work order's requirement date)
    - The priority of the work order
  - know when my materiel is in available depot stock
  - the MMR's internal comments and technical details
  - ERN-related information
  - the IMA Code of the materiel
- be able to monitor overdue materiel and proactively address potential future shortages
- be able to seamlessly navigate among ECC transactions

# ZEPM\_ODR Resources

# Module 3G - DSC Business Execution

## MAIN TOPICS

- A. Core Supply Chain Concepts, Goals and Operation
- B. Integration in the DSC
- C. Materiel Requirements Planning (MRP) Concepts
- D. Roles & Responsibilities
- E. IT Systems & Tools
- F. **Enabling the Smooth Flow of Data and Materiel**

# Learning objectives

## Module 3 – DSC Business Execution Section F. Enabling the Smooth Flow of Data and Materiel

At the end of this Section, you will be able to:

- Express, using key use cases, how to enable the smooth flow of data and materiel in the DSC

## Activity 3-5

**Join at [slido.com](https://www.slido.com)  
Event code: DSC**

# SLIDO #3-5: Demand Prioritization – Non-HPR Demands

True or False - At the Depot level, non-HPR demands are satisfied in the order they are received regardless of the importance of the demand.

ANSWER: **TRUE**

- The root cause of this is that for non-HPR items, Program Code related to ATP at the depot does not consider the importance of the demand when determining which demands are to be satisfied; rather, it fulfills demand by the earliest requirement date which essentially means that the earliest demands get satisfied first. This is often referred to as First In First Out (FIFO). So, for example, if two demands for an MMR are received, the first one for a RoP and a following one raised by an operational theatre, the RoP demand is automatically actioned first
- A Business Requirement has been raised to revise the Program Code to take into consideration other importance factors (e.g. requirement to support in-theatre or deployed operations, requirement to make an operational system serviceable, etc)

107

## Case Study 2/4: Inability of Depots to Ship Materiel that is In Stock

Restricted Items (previously IMA Code 1\*) require the approval of a Supply Manager or Technical Authority to release them

Other related root causes of this condition are:

- Unreleased PReqs cannot be converted to STOs.
- Depots can create Deliveries to ship materiel only against STOs, not Preqs.
- Although a system tool exists to identify (and release) PReqs in a timely manner (e.g., when stock exists) it does not have widespread use

**NOTE:** The ODR provides functionality that enables applicable actors to expeditiously resolve many of the root causes.

# Case Study 3/4: Inability to prevent external purchasing of materiel when stock already exists in DND

There are several permutations of this:

- Materiel is often purchased for common stock when, in fact, project stock exists within DND
- The reverse of the above
- Materiel is often purchased for a depot when another depot has stock
- Materiel is often purchased when repairable stock exists

Root cause: a simple lack of visibility to stock that may be available elsewhere in DND prior to initiating external procurement.

## SDI: Example of information related to stock available elsewhere

25 CFSD has stock available, 7 CFSD has demand from Operations.  
The system would inform the user of this condition.

Component *	Depot: MRP Area Desc.	Demand Source	Co...	IMA*	Component Text	Work order *	Outstandin...	Current Supply Chain Progress *

# Case Study 4/4: Inability to Consolidate Supply Objects as Demands Move Up the DSC

- Standard SAP has an out-of-the-box capability to perform period-based lot sizing.
- When this technique is used, multiple demands are consolidated into a single procurement object (a Preq)
- The consolidation of supply results in much fewer picks, packaging and goods issues and goods receipts transactions. In some cases, this could result in a 90% reduction of materiel handling and transaction costs.

**Root cause:** The premature conversion of Preqs to stock transport orders prevents MRP from using period-based lot sizes.

## Consequence of not using Period-based Lot-Sizing

- Multiple picks of the same materiel (or disaggregation post-pick)
- Requires multiple packages for the same materiel destined for a specific destination
- Multiple goods receipts required at receiving destination

# Summary - Why Are We Here?

- Foundational knowledge is key to the enablement of the DSC mission and vision
- The DSC exists both as a concept (e.g. model) and as a physical entity – both aspects are enabled by an ERP and associated applications to support military operations
- Properly configured DSC Tools, ensures compliance and the audit trail comes as a free by-product

# Key Takeaways

## A. Core Supply Chain Concepts, Goals and Operation

**The DSC at its core (concept plus enablement), is powered by an instance of an SAP-based ERP called DRMIS and what you do as DSC practitioners at the operational / tactical level have strategic implications.**

## B. Integration in the DSC

**The efficient and effective operation of the DSC is greatly diminished without integration in all its forms: Intra-Module; Cross-Module; Cross-Application; and Business Process**

## C. Materiel Requirements Planning (MRP) Concepts

**MRP, which balances supply and demand, is the heart of a Supply Chain.**

## D. Roles and Responsibilities

**The DSC involves many actors that must work together within defined roles to enable the right materiel to be delivered to the right location, in the right condition, in the right quantity and at the right time.**

## E. IT Systems and Tools

**The DSC is made up of many systems and tools – the Outstanding Demands (ZEPM\_ODR) report is the only DRMIS report that matches supply to workorder demand and is capable of navigating through the Defence Supply Chain while reflecting live DRMIS data.**

## F. Enabling the Smooth Flow of Data and Materiel

**You are part of the DSC capability. Accurate Execution has downstream effects which makes YOU a critical enabler of Operational Effectiveness.**

Event code: DSC**

# Module 4 - DSC Analytics

## Main Topics:

1. What is analytics
2. How analytics are built
3. How you can use analytics

# Topic #1: What is Analytics

In this stage of the module, we will cover:

- What defines analytics?
- The difference between reporting and analytics
- How does analytics apply within DND?

# What is Analytics?

[...] military leaders rely heavily on rational/logical models for planning and executing missions. Once the action starts, there may not be time to gather and analyze data in order to make adjustments to planned strategy. Intuitive decision making based on experience under time pressure is often the only alternative to making no decision at all.

**Crafting a Data-Driven Culture**

To truly unlock the power of Business Analytics, it's crucial for organizations to **cultivate a data-driven culture**. This entails fostering an environment where **data is seen as a strategic asset** and **decisions are guided by evidence** rather than gut feelings.

By contrast, if you make a business decision to commit resources to a new project based on “gut feeling” and not on analysis of projected costs and benefits, you are likely to make some very expensive mistakes.

William Adkins, The Disadvantage of Mixing Decision Support Models

## Washer Case Study

- There are 3 outstanding WOs from Nov 2023 at the AEFC pointed at Mtl Depot for grounded LAV 6.0 that requires Qty 9 HD.
- There are 126 HD in Edm & Halifax Depot that could be used to fulfill the WO.
- Despite the New Buy PReq for 13 HD, DSC Analytics recommends buying 2378 HD.  
**So WHAT?**
  - Requirements get fulfilled immediately
  - NP is spent more deliberately

# DSC Analytics Material Management Dashboard

## Outstanding Work

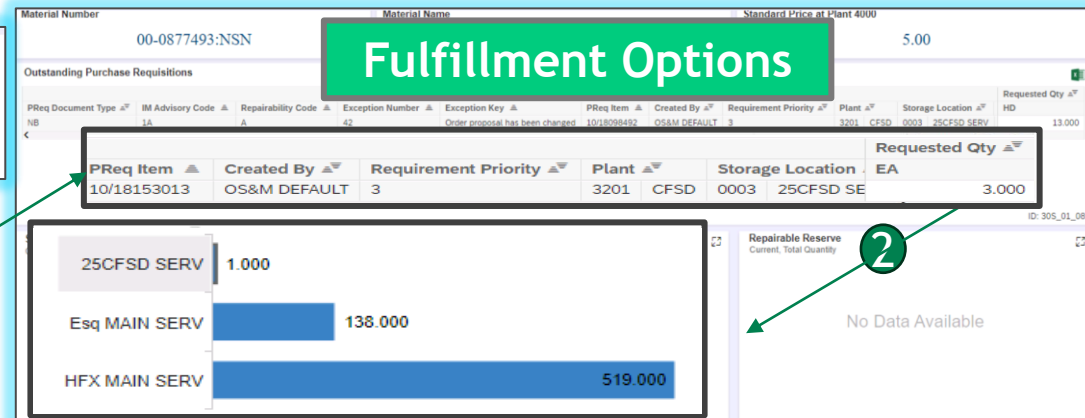

Equip. Object Type	Equip Tech Status	PM Order	Material Number	High Priority Indicator	Requirements Date
LAV 6.0	Grounded	1102996107	MS15795-824:80205	WASHER,FLAT	High Priority
					3/3/2023

MS15795-824:80205 WASHER,FLAT **1**

## Purchase Recommendations

There are none! **3**

## Fulfillment Options

## Washer Case Study

- 1** There is an outstanding WO at the AEFC pointed at Mtl Depot for a grounded LAV 6.0 that requires Qty 4 - Req date of 3 Mar 23...
- 2** There is only 1 at 25 CFSD but a total of 658 across the DSC that could be used to fulfill the WO.
- 3** Despite the New Buy PReq for 3, DSC Analytics recommends buying None!  
So WHAT?
  - Requirements get fulfilled immediately
  - NP is spent more deliberately

## Followed Supporting Relationship (Happy Path)

Automated

## Did NOT Follow Supporting Relationship (Non-Happy Path)

Manual Intervention

### 2020-21 STOs

Excludes:

- All Ships
- All \_S MRP Areas
- All clothing accounts
- Plants 5000 to 5999
- No RMA/CRPA
- Publication Depot (in/out)
- Reverse logistics

	Happy Path	Non-Happy Path
Total Volume (LI)	55.98%	44.02%
Total Volume (Qty)	56.05%	43.95%
POF (LI)	61.81%	50.57%
High Priority (LI)	47.36%	52.64%

DRMIS was configured to allow materiel demands to go up the supply chain based on the supporting relationship, which we will call the Happy Path. In 20/21, **44% of all Stock Transport Orders (STO) did not follow the Happy Path**. When the Happy Path was followed, STOs had a 61% POF, while STOs that followed the non-happy path had a 50% POF.

# Module 4: Question & Answer

**Join at [slido.com](https://www.slido.com)  
Event code: DSC**

# Key takeaways

## Analytics Data

- Functional data sets such as DSC should be managed centrally
- Limit manual data manipulation

Excel

## Dashboards

- Consider what's under the hood...
- Leverage enterprise capabilities first
- Tailor build dashboards for your line of business, with centralized data
- Highly paid contractor are not required...

## Analysts

- Look beyond the picture
- Dedicate resources to analysis work
- These analysts need to act on the information, not producing competing dashboards...

DMPP 7

# The Cycle

# Module 5 - Reporting

## Main Topics:

1. What We Report
2. Why We Report
3. How We Report

# Learning objectives

## Module 5 - Reporting

At the end of this module, you will be able to:

- Understand why the management of materiel and associated data is critical to reporting back to the Government of Canada

## Activity 5-1

**Join at [slido.com](https://www.slido.com)  
Event code: DSC**

# Topic #1: What We Report

All Departments are mandated to report back to the Government of Canada

What we did with the resources we were given:

Financial

Materiel

Human Resources

Infrastructure

How well we achieved the mandate that was given to us:

Operations

Readiness

Training

Budgeting

Procurement

Environmental Protection

# Topic #2: Why We Report

In some instances, we self-report and in others we are audited by internal auditors (Review Services) and external auditors (Office of the Auditor General).

We report to Demonstrate:

## Sound Stewardship & Value for Money

- We are responsible with the resources we have been granted by the public

## Program Delivery

- Show that our programs/mandate are achievable
  - Strong at Home
  - Secure in North America
  - Engaged in the World

## Priorities of Canada

- Show that we are able to achieve the Priorities
  - Green Procurement/Indigenous Procurement
  - Fuel Management
  - Toxic Substance Management

# Topic #3: How We Report

We use Instruments such as:

Departmental Plan

Departmental  
Results Report

Management  
Action Plans

Financial  
Accounts/Public  
Accounts  
Statements

Office of Auditor  
General  
Reports/Responses

Material  
Accountability  
Action Plans

# Integration

- The data that we generate through all of the processes that are executed in the Business Execution Phase that are articulated and designed in the Policy phase is what is pulled in the Validation and Reporting Phase.
- The data is cross-functional and multi-purpose

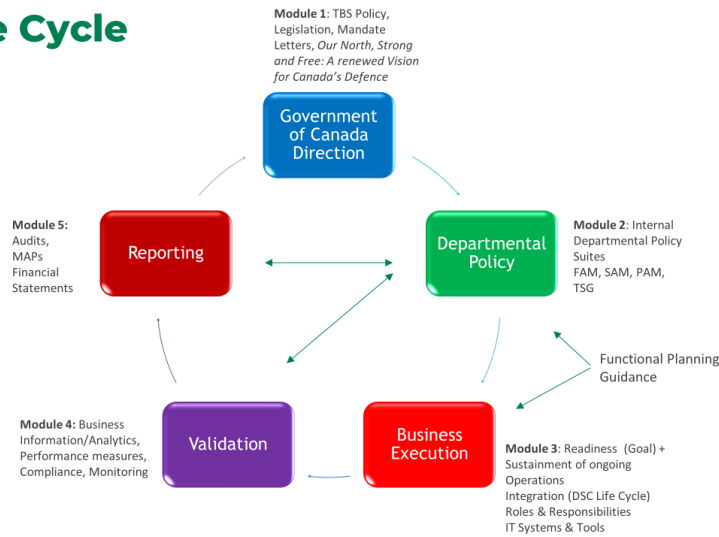

# Moule 5: Question & Answer

**Join at [slido.com](https://slido.com)  
Event code: DSC**

# Key Takeaways

## The Cycle

- We are tasked by Government through multiple instruments
- That information is converted into internal policies that may include process and procedures
- Business is executed
- Internal Analytics and Compliance are done
- Resulting in reporting back to Government that we did what we were tasked with the resources we were given.

## Materiel accountability

Director Supply Chain Operations (DSCO) 2-3 is the DSCO Centre for materiel accountability. It provides materiel management guidance, training, and oversight on subjects pertaining to stocktaking, inventory planning, and supply chain business intelligence. In addition, it helps L1s in the preparation and interpretation of formal documentation included in their bi-annual Materiel Accountability Action Plan (MAAP) and their materiel attestation submissions.

As a client-focused, service-oriented program, DSCO 2-3 is able to help an organization reach their materiel management and reporting goals.

An organization's participation in the program is an important element of DND's materiel management success. When DND is accountable for the management of materiel, operational effectiveness is improved and the public is well served.

For further information, questions or help with your materiel management and reporting goals, please contact the [DSCO 2-3 mailbox](#).
