The Quality of Life Data Value Chain

- The Quality of Life Statistics Program is about creating a 'value chain', starting with data on what matters most to Canadians, that can drive change at the system level and ultimately create public value in the form of better results for Canadians.

Measuring What Matters

QUALITY OF LIFE

> Looking at non-economic factors that matter to Canadians like health, housing, environment, and safety.

1

EQUALITY

> Looking at the distribution of outcomes and opportunities across places and people.

2

SUSTAINABILITY

> Looking at whether today's prosperity undermines future living standards.

3

Released in Budget 2021, the Quality of Life Initiative is Canada's response to a growing global consensus that public policy must be:

1. **Multi-dimensional and holistic** – by considering the full spectrum of economic, social and environmental considerations that matter to a good quality of life;
2. **Inclusive** – by considering not just national averages in these trends, but also the differential experiences of groups that make up our diverse society;
3. **Sustainable** – by considering the long-term implications of our decisions across these domains and indicators, and actively considering risk and resilience in decision-making processes.

Canada's Quality of Life Framework

Domains and headline indicators

Prosperity

- Household incomes
- Employment
- Youth not in education, employment or training (NEETs)
- Housing needs
- Poverty

Health

- Health-adjusted life expectancy
- Self-rated mental health

Society

- Sense of belonging to community
- Someone to count on
- Time use

Good Governance

- Personal safety
- Confidence in institutions
- Discrimination and unfair treatment

Environment

- Air quality
- Drinking water
- Climate change adaptation
- Greenhouse gas emissions
- Conserved areas

Life satisfaction

Sense of meaning and purpose

Fairness and Inclusion

Cross-cutting lens that disaggregates all indicators in the framework:

- Gap between best and worst outcomes
- Summary measures of inequality
- Performance of socio-economic groups (e.g. gender, age, ethnicity, socio-economic status)
- Performance by region (e.g. provinces, cities, urban vs. rural)
- Prevalence of poor outcomes

Cross-cutting lenses

Sustainability and Resilience

Cross-cutting lens that offers a long-term view for all domains in the Framework and encourages decision-makers to consider risk, resilience and sustainability

Quality of Life Framework Infosheet

Prosperity

- ★ **Income and growth**
 - Household income
 - GDP per capita
 - Productivity
 - Access to high-speed Internet
 - Household wealth
 - Investment in in-house research and development
 - Public debt-to-GDP ratio
 - Firm growth
- ★ **Employment and job quality**
 - Employment
 - Labour underutilization
 - Wages
 - Precarious or gig work
 - Job satisfaction
- ★ **Skills and opportunity**
 - Youth not in employment, education or training (NEET)
 - Access to early learning and child care
 - Child, student and adult skills
 - Postsecondary attainment
 - Future outlook
- ★ **Economic security and deprivation**
 - Acceptable housing
 - Poverty
 - Protection from income shocks
 - Financial well-being
 - Homelessness
 - Food security

Health

- ★ **Healthy people**
 - Health-adjusted life expectancy
 - Self-rated mental health
 - Self-rated health
 - Physical activity
 - Functional health status
 - Children vulnerable in early development
 - Fruit and vegetable consumption/healthy eating environments
- ★ **Healthy care systems**
 - Timely access to primary care provider
 - Unmet health care needs
 - Unmet needs for mental health care
 - Long-term care (access and quality)
 - Access to supplementary health insurance
 - Unmet needs for home care
 - Cost-related non-adherence to prescription medication

Society

- ★ **Culture and identity**
 - Sense of pride/belonging to Canada
 - Positive perceptions of diversity
 - Indigenous languages
 - Knowledge of official languages
 - Participation in cultural or religious practices, recreation or sport
- ★ **Social cohesion and connections**
 - Sense of belonging to local community
 - Someone to count on
 - Trust in others
 - Volunteering
 - Satisfaction with personal relationships (family and friends)
 - Loneliness
 - Accessible environments
- ★ **Time use**
 - Time use
 - Satisfaction with time use

Environment

- ★ **Environment and people**
 - Air quality
 - Drinking water
 - Climate change adaptation
 - Natural disasters and emergencies
 - Satisfaction with local environment
 - Walkable communities
 - Access to public transit
- ★ **Ecological integrity and environmental stewardship**
 - Greenhouse gas emissions
 - Conserved areas
 - Canadian species index
 - Water quality in Canadian rivers
 - Natural capital
 - Waste management
 - Marine and coastal ecosystems

Good Governance

- ★ **Safety and security**
 - Personal safety
 - Crime Severity Index
 - Perceptions of neighbourhood safety after dark
 - Childhood maltreatment
 - Household emergency preparedness
- ★ **Democracy and institutions**
 - Confidence in institutions
 - Voter turnout
 - Representation in senior leadership positions
 - Canada's place in the world
 - Misinformation/trust in media
 - Indigenous self-determination
- ★ **Justice and human rights**
 - Discrimination and unfair treatment
 - Cyberbullying
 - Access to fair and equal justice (civil and criminal)
 - Resolution of serious legal problems
 - Incarceration rate

★ Life satisfaction

★ **Headline indicators:** intended to provide a high-level assessment of overall quality of life in Canada.

The **Fairness and Inclusion lens** is intended to inform policy and program development, leading to greater equity and equality, by assessing the distribution of outcomes for different populations in Canada.

★ Sense of meaning and purpose

The **Sustainability and Resilience lens** promotes long-term thinking by considering the trajectory of indicators in order to identify risks, build resilience and ensure that policy choices are contributing to a higher quality of life not only now but in the years ahead.

Accessing the data for the QoL Statistics Program

The Hub

The screenshot shows the 'Quality of Life Hub' website. At the top, there is a notification banner: 'Canada's Quality of Life Hub is currently in development. We need your help! If you have ideas or thoughts for what you'd like to see on the Hub, Statistics Canada would love to hear about it. Your input is invaluable as we continue to develop the Quality of Life Hub.' Below this is a 'Share your feedback' button. The main content area is titled 'What is quality of life?' and includes a definition: 'Quality of life (well-being) refers to the wealth and comfort of individuals, communities and society based on both material and non-material factors that are important to people's lives, such as health and social connections.' Below this is the 'Canada's Quality of Life Framework' section, which states: 'The Quality of Life Framework for Canada brings together data for approximately 85 key indicators on the well-being of people in Canada. The Framework enables the federal government to identify future policy priorities and to build on previous actions to improve evidence-based decision making and budgeting. For more information, please refer to [About the Quality of Life Framework for Canada](#).' To the right of the text is a circular diagram representing the 'Quality of Life Framework'. The diagram is divided into five segments: 'Fairness and Inclusion' (top), 'Prosperity' (top-left), 'Health' (top-right), 'Society' (right), and 'Environment' (bottom). The center of the diagram is labeled 'Quality of Life'. Below the diagram is a small box with the text 'Description - Quality of life identifier'.

- Statistics Canada's Quality of Life Hub was released in March 2021.
- The Hub brings together key economic, social, and environmental datasets and develop a user interface to better support decision-making and budgeting
- [Quality of Life Hub \(statcan.gc.ca\)](https://www.statcan.gc.ca)

Filling Data Gaps

- The Quality of Life Statistics Program is also collecting new, and/or more timely data on quality of life indicators, including through the Canada Social Survey (CSS)
- Concurrent investments through the Dissaggregated Data Action Plan to extend surveys to better document differential experiences by population group
- Gaps in dissemination are being closed by data and analytical products on the Hub

Canadian Social Survey

Sense of meaning and purpose, life satisfaction, loneliness, etc.

Tax data

Mailing address every year, income

Census data

Demographic/household characteristics, marital status, language, tenancy

Geographic characteristics

Environmental data, neighbourhoods, walkability, etc.

Other administrative data

Health data, justice data, etc.

Facilitated through linkage in the Social Data Linkage Environment (SDLE)

e.g., Currently linking *Canadian Social Survey* to *tax* and *Census* data to examine how *Quality of life* influenced by *housing affordability*

PEOPLE:
Distributional differences, composition, etc.

FAIRNESS AND INCLUSION

PLACES:
Regions, communities and geo-spatial data

OUTCOMES:
Thematic areas

Society

Prosperity

Health

Good governance

Environment

INTEGRATED SYSTEM

TIME:
Historical trends, current status,
expected future trajectories

SUSTAINABILITY AND RESILIENCE

What's different?

- Quality of Life framework offers an **umbrella for conceptual integration, embedded into the policy development process** which often drives data demands
- **Collecting new data** – e.g., *Sense of meaning and purpose*, inspired by UK definition
- **Harmonized set of indicators** enables more targeted approach to prioritizing data collection gaps (e.g., hard-to-reach populations)
- Concurrent investments in **more granular data** (Disaggregated Data Action Plan)
- **Collecting data for key indicators more frequently**, including a quarterly time series for some indicators through new omnibus Canadian Social Survey
- **Frequency yields insights**; e.g., subjective experience of rising inflation – *Difficulty meeting financial needs* particularly acute in Q4 2022
- **Integrated data ecosystem also yields insights** – e.g., movements in other quality of life measures such as *Sense of belonging to local community, Future outlook* alongside *Difficulty meeting financial needs*

Where to from here?

- **Bring the Quality of Life framework to life** as a monitoring system linked to interdepartmental collaboration – evidence to action to impact measurement
- **Build towards a cohesive social data ecosystem** based on:
 - **Outcomes:** A well-developed set of ‘beyond GDP’ indicators through the QoL framework
 - **People:** Standard breakdowns to enable group-level comparisons across QoL outcomes, intersectional analysis
 - **Places:** Standard geographical breakdowns across QoL outcome measures
 - **Time:** Strengthen the feedback loop between interventions and impact measurement by building consistent time series’ for key social indicators
- **Familiarize stakeholders with new data landscape**, demonstrate value and insights that are policy-relevant
- **Consideration of more complex dynamics** and conceptual underpinnings– e.g., life course, individuals/families/ communities, determinants vs outcomes
