BizPaL

UNLEASHING THE POWER OF REGULATORY TEXT AS DATA

TODAY'S REALITY

Challenges for Business

- Spending too much time navigating multiple government websites to find business compliance requirements
- Conflicting/duplicative compliance requirements across different levels of government

Challenges for Government

- Data siloed within multiple jurisdictions impedes the identification and alleviation of regulatory burden
- Valuable information about business compliance requirements is locked in unstructured PDFs

NextGen BizPaL

By leveraging collaboration, data and technology, the NextGen BizPaL will simplify compliance analysis, support business growth, and reduce the risk of non-compliance.

The expanded service will arm businesses and regulators with a powerful search tool to understand, analyze and compare regulatory compliance obligations from multiple levels of government.

BENEFITS + OUTCOMES

Serve Canadians by addressing institutional and cultural barriers to service transformation, and committing to building innovative tools in-house through a cost-effective solution.

For Business

- Enable simple and transparent access to business compliance requirements
- Offer a fulsome compliance search to establish a more well-rounded assessment of compliance requirements
- Enable compliance search via multiple inputs such as industry, products, services and activities.

For Government

- Enable instant access to compliance requirements
- Facilitate the identification of regulatory burden through a comparison of regulatory data
- Help unlock valuable data from unstructured PDFs

HOW ARE WE DIGITIZING REGULATORY DATA?

Laying the groundwork for the digital future by keeping a focus on user experience, online data, innovation and iteration.

Building a dynamic, stable, nimble data model to meet users' current and evolving needs, supported by sound information architecture and artificial intelligence.

Taking a data-centric approach to support businesses and stakeholders in accessing tailored government data through a trusted source.

Keeping a focus on governance, cooperation, engagement and risk management to facilitate data exchange to empower future digital delivery.

THE DATA MODEL

INPUT = Fragmented and disorganized regulatory data

Regulatory Info Source
Regulations, Statutes, Licences and Permits, Bylaws, IBR, RIAS

Automated

Hybrid / Assisted

Supported / Guided
