

HEALTH PROFILE

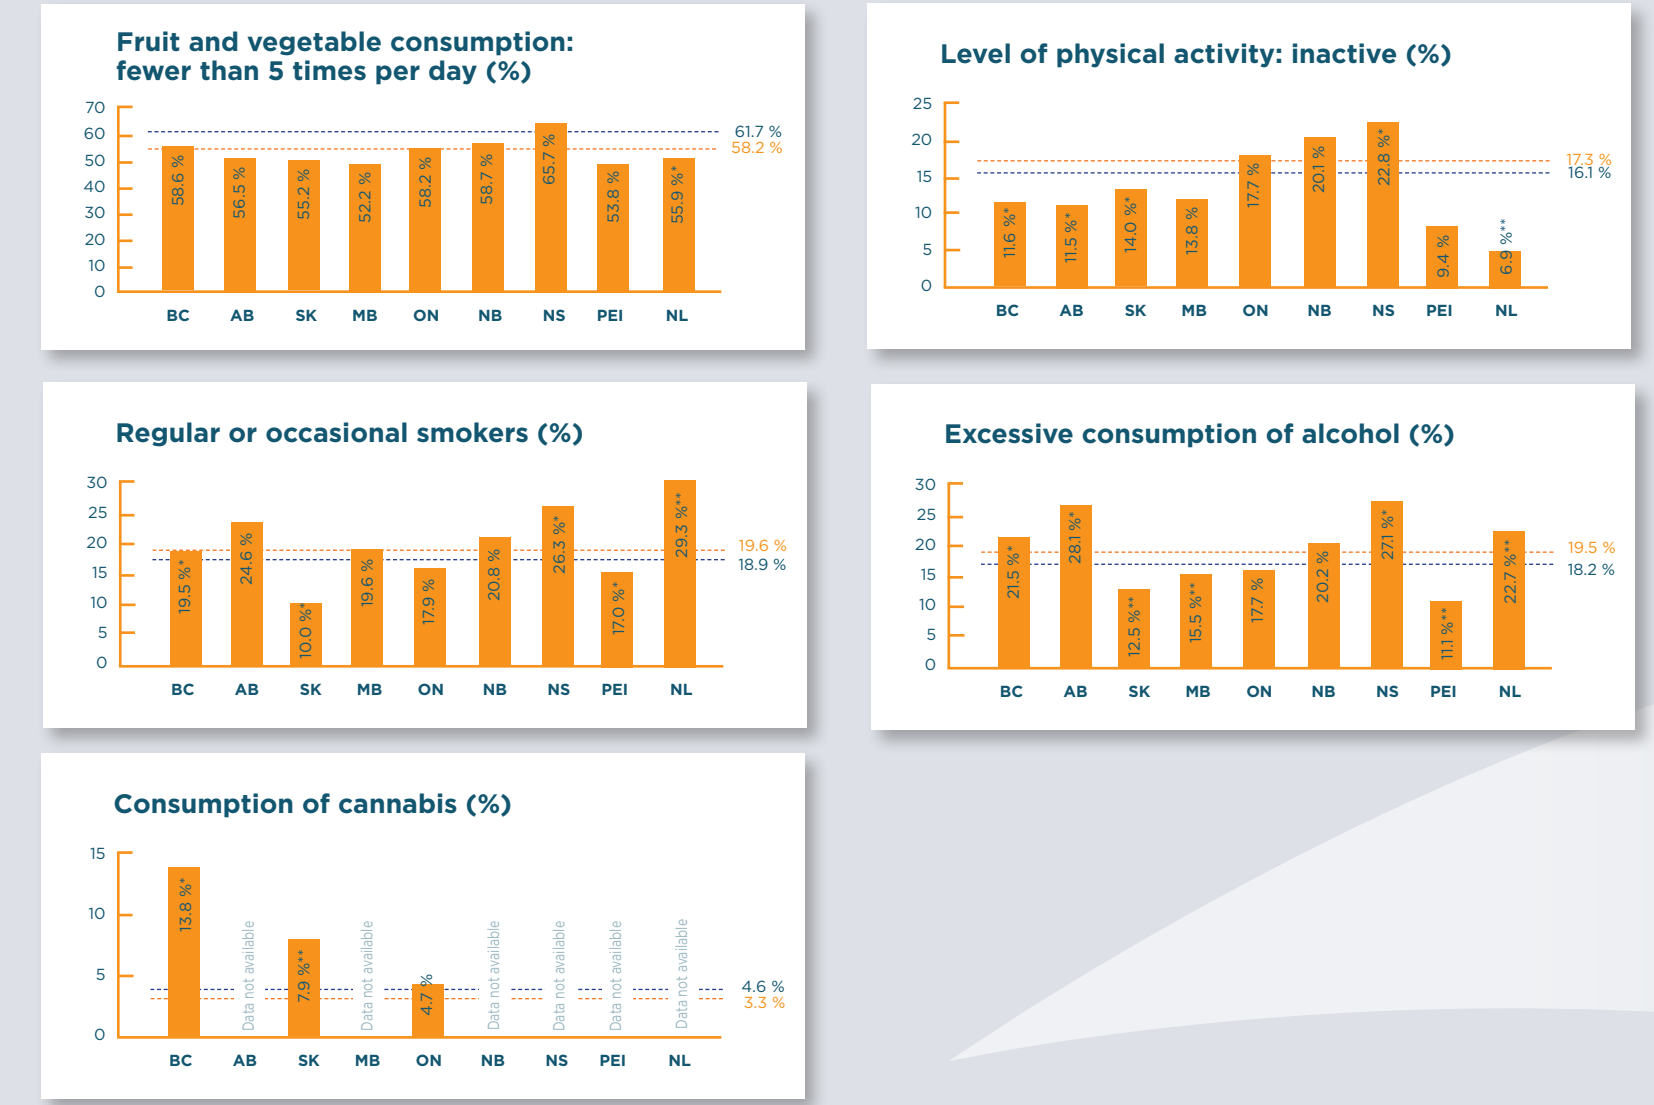

OF FRENCH-SPEAKING MINORITY COMMUNITIES IN CANADA

CHARACTERISTICS OF THE POPULATION

HEALTH HABITS AND BEHAVIOURS

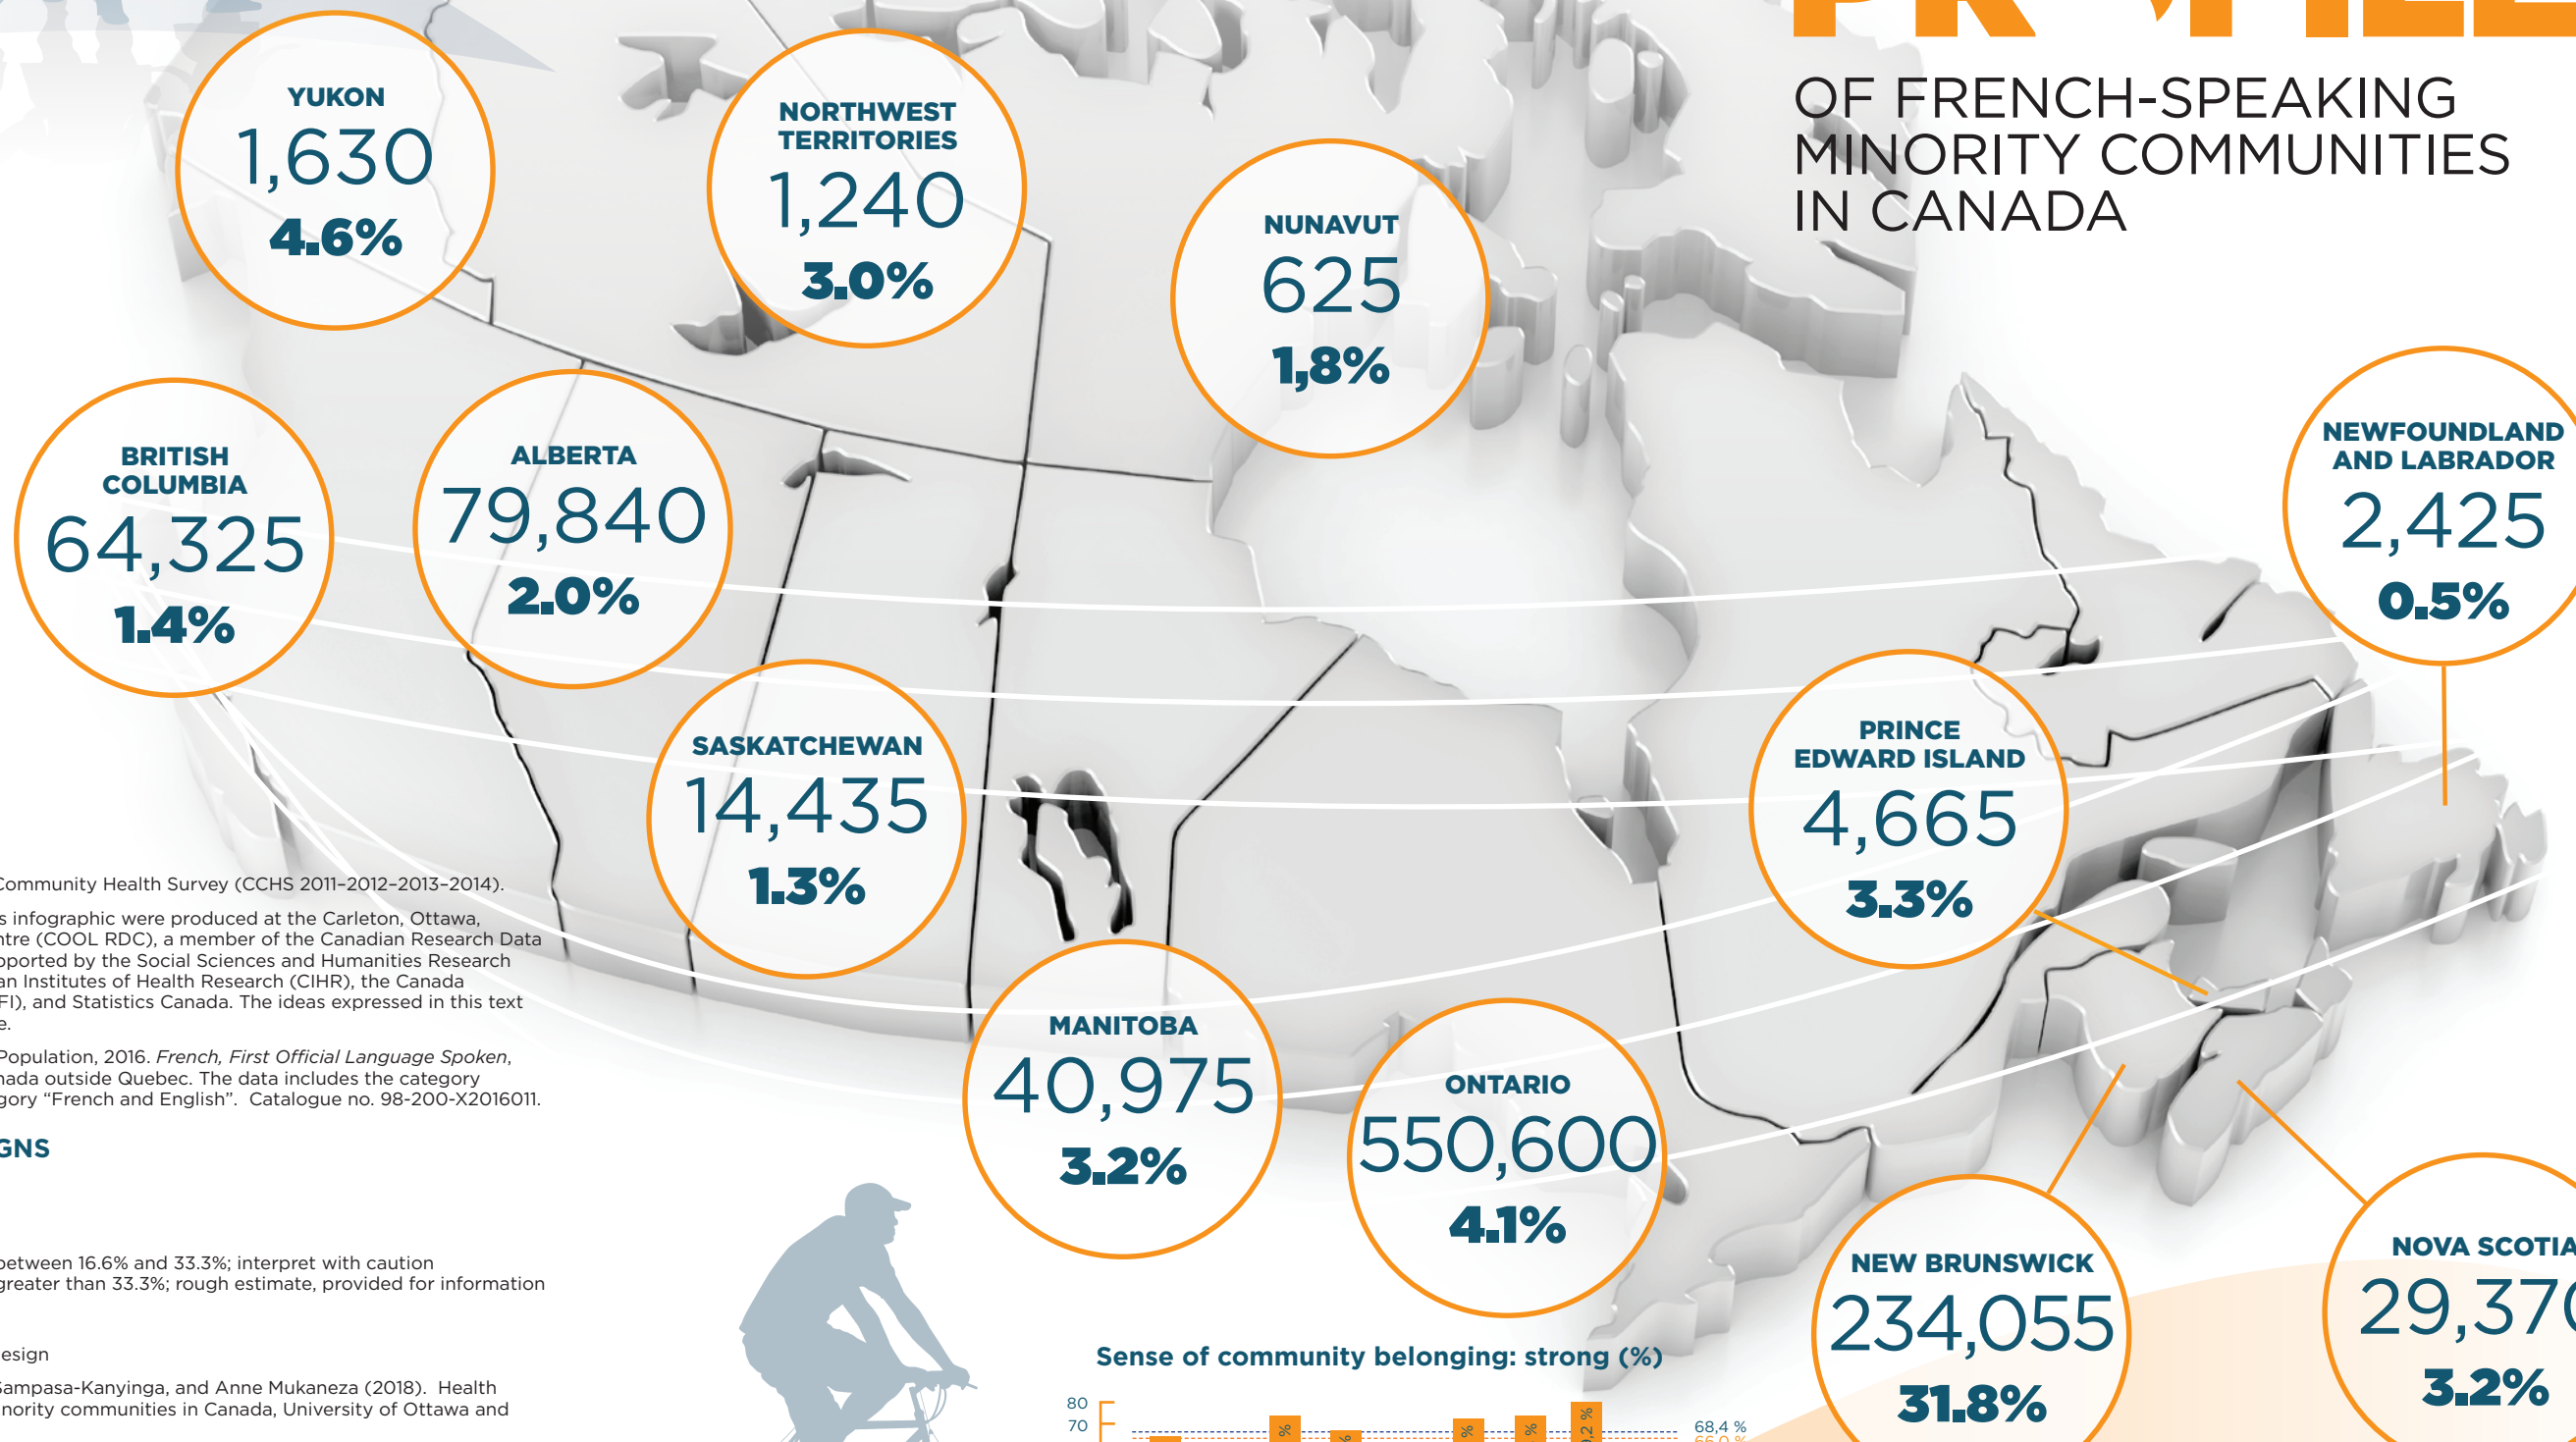

DISTRIBUTION OF FRANCOPHONES OUTSIDE QUEBEC

This poster presents a selection of indicators describing various health aspects of the official language minority Francophone population in different provinces of Canada.

These indicators are taken from a secondary analysis of the Canadian Community Health Survey (CCHS), combining the 2011-2012-2013-2014 cycles to compensate for the low sample of Francophones living outside Quebec. The weighted data is based on a sample of 200,183 persons: 9,708 Francophones and 190,475 Anglophones. The linguistic groups were identified using an algorithm that filtered French and English speaking respondents according to four variables found in the CCHS: conversation language, mother tongue, interview language, and preferred language of contact during the survey. When the sample size per region is too small, data remains confidential. Non-available data means that the province / territory did not select the question for survey participants.

DATA SOURCES:

Statistics Canada, Canadian Community Health Survey (CCHS 2011-2012-2013-2014). The analyses presented in this infographic were produced at the Carleton, Ottawa, Outouais Research Data Centre (COOL, RDC), a member of the Canadian Research Data Centre Network (CRDCN) supported by the Social Sciences and Humanities Research Council (SSHRC), the Canadian Institutes of Health Research (CIHR), the Canada Foundation for Innovation (CFI), and Statistics Canada. The ideas expressed in this text are those of the authors alone.

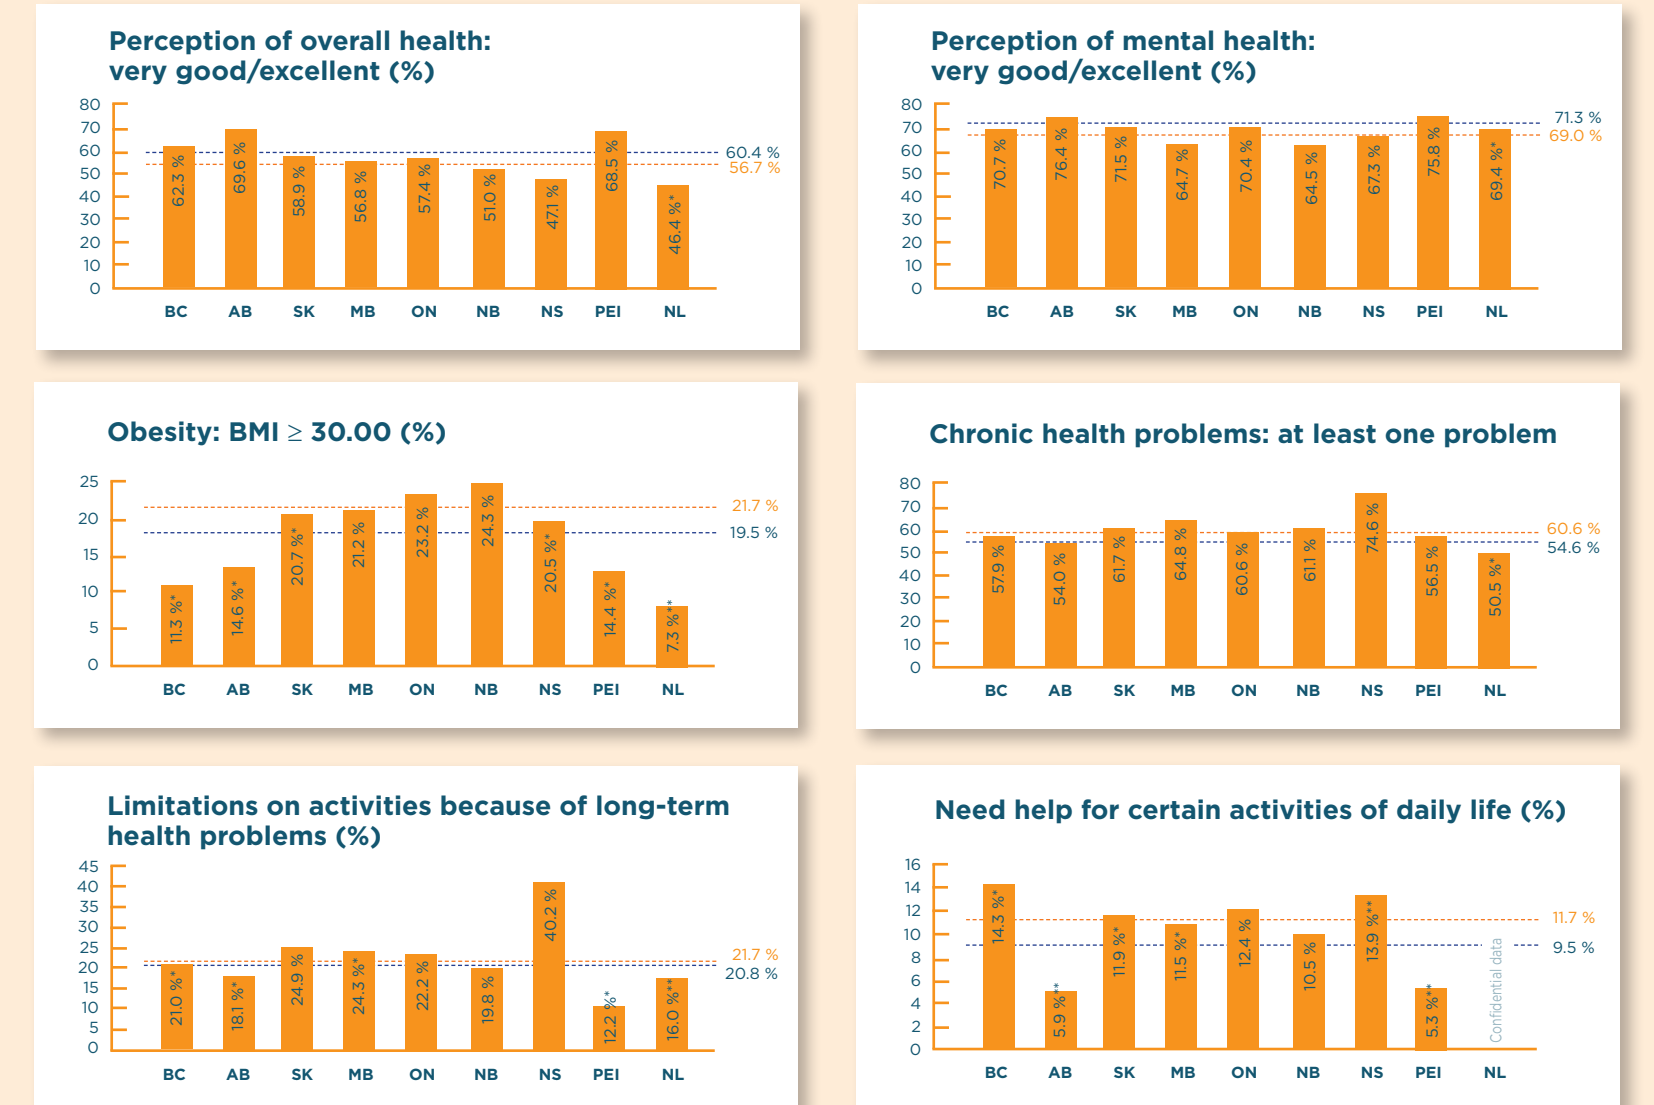

Statistics Canada, Census of Population, 2016, French, First Official Language Spoken, provinces, territories, and Canada outside Quebec. The data includes the category "French" and half of the category "French and English". Catalogue no. 98-200-X2016011.

CONVENTIONAL SIGNS

Canadian Proportion
 --- Anglophone majority
 --- Francophone minority
 * Coefficient of variation between 16.6% and 33.3%; interpret with caution
 ** Coefficient of variation greater than 33.3%; rough estimate, provided for information purposes only
