National Defence

Project Overview

- Gov policy documents can be extremely long
- Need an easier way to get answers for users' questions
- Provide a natural language interface to complex policy documents
- Explore feasibility of using NLP to automatically analyze policies and answer questions without pre-written scripts

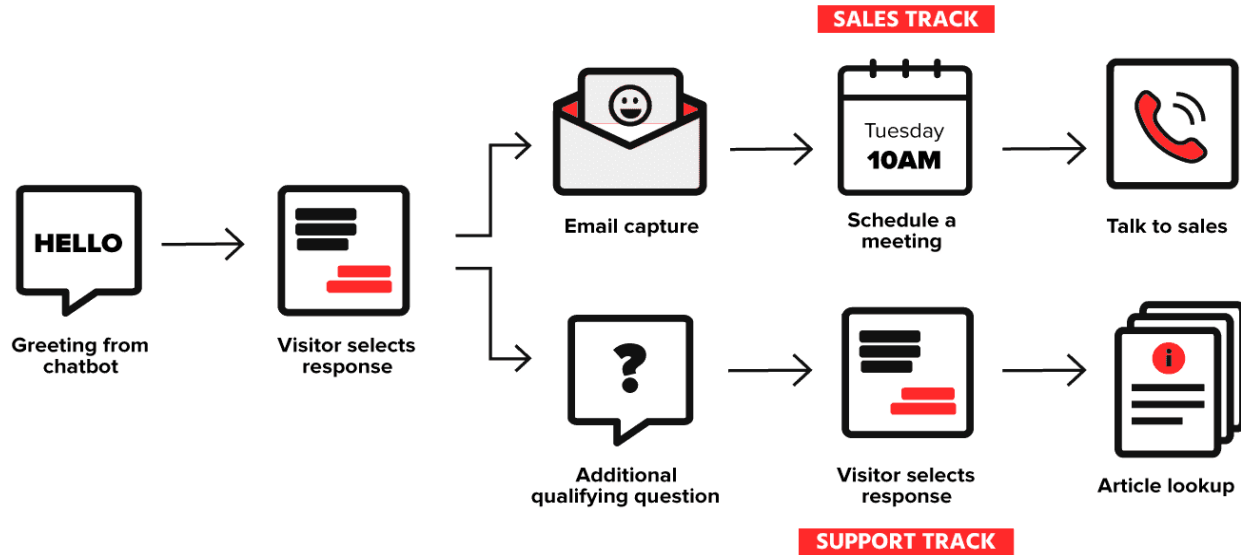

Two Types of Chatbots

- Rule Based
 - ✓ Keyword search
- AI Powered
 - ✓ Semantic search

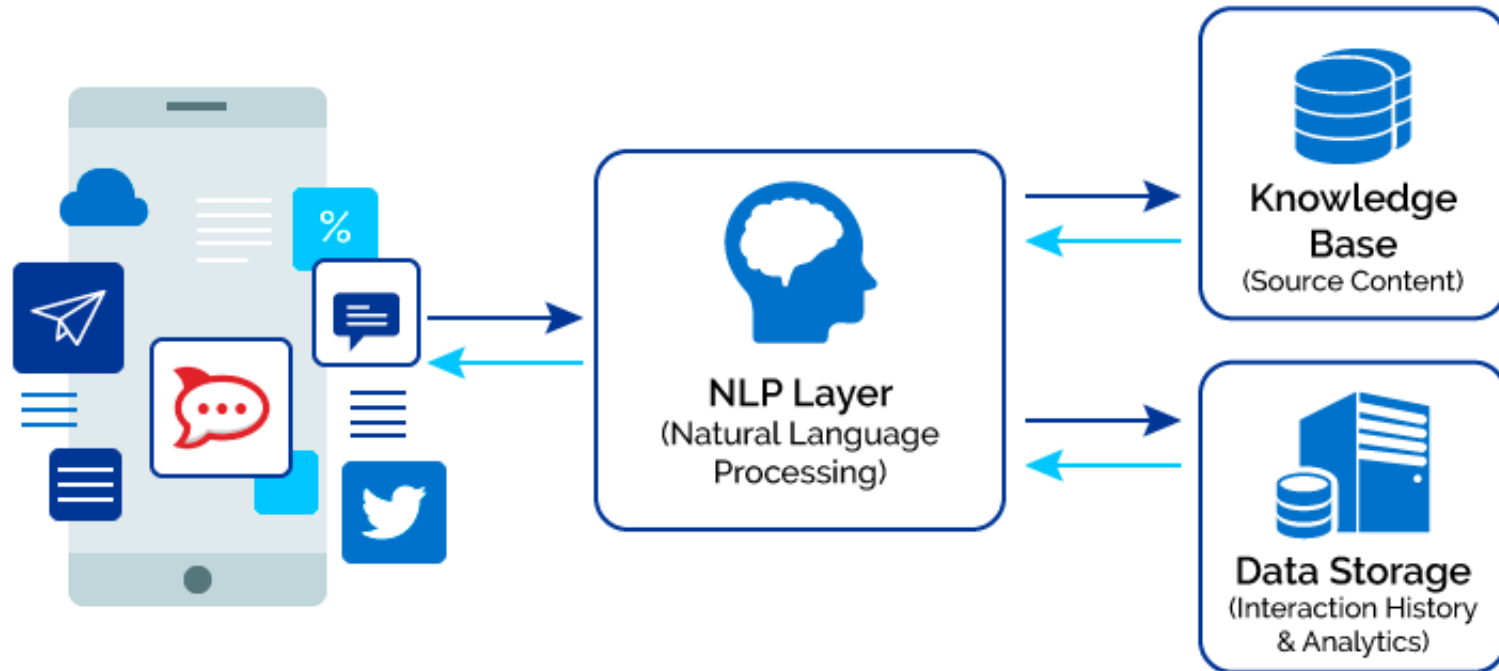

Rule Based Chatbot

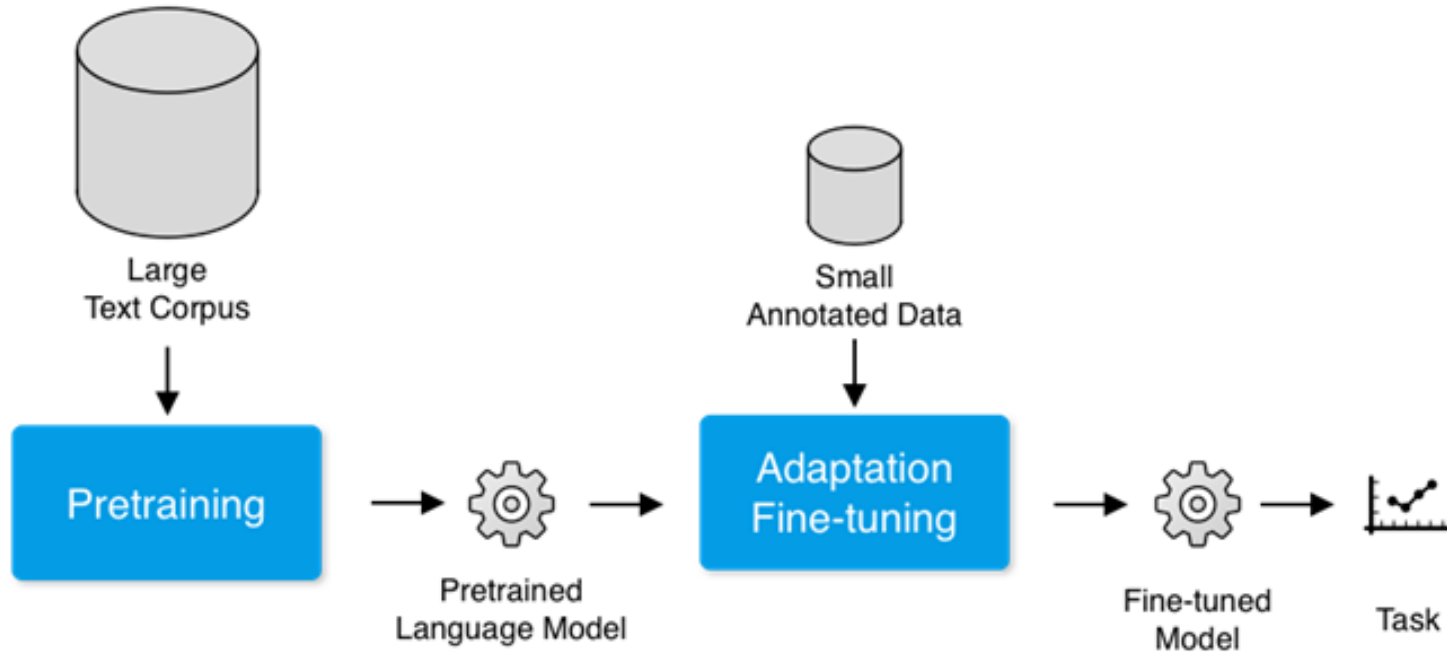

AI Based Chatbot

NLP Model

State-of-art Conversational AI Technologies

HUGGING FACE

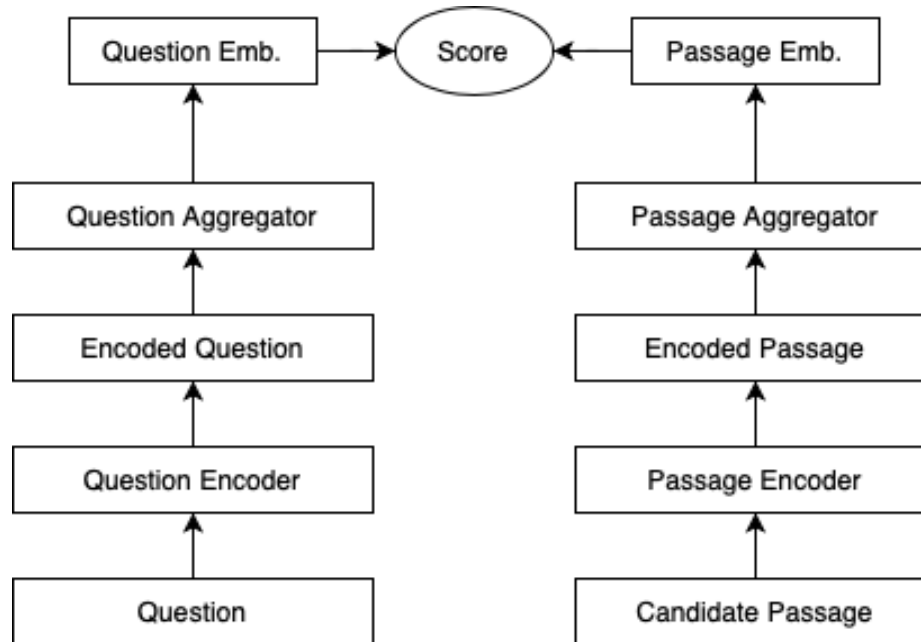

FACEBOOK AI

Semantic Search

Current State of AI Chatbot

- Trained on the Military Dress Manual
- Currently being expanded on other policies and standards
- A user asks a question and the system retrieves the top passage that it believes contains the answer
- Does pretty well at answering questions that have enough detail
- 85% accuracy before fine tuning.
- Reproducible technical details published in a peer-reviewed scientific report.
